The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise action that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for inking a teast one biological activity of a cell. PRO polypeptides are useful concerned for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing a PRO polypeptides. The PRO polypeptides or polymenticals, diagnostics, biosensors or polymentical are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated proliferation of chimulated T-lymphocytes, enhancing the survival or proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of cells, modulating glucose or FFA uptake, inducing proliferation and/or receiptor cells, inducing proliferation and/or receiptor cells, modulating closs in endothelial cells, cells, modulating proliferation and/or receiptor cells, inducing are useful for modulating chose or FFA uptake, inducing proliferation and/or receiptor cells, inducing are useful for modulating and control in particular, these are useful for modulating control in particular, these are useful for modulating control in particular.

```
cc detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arbitritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides or consistent biology including uses as hybridisation probes of or cDNA library to isolate the full-length PRO cDNA or to isolate other con DNA, for preparing PRO polypeptides, for generation of antisense RNA can DNA, for preparing PRO polypeptides, for generation of antisense RNA can and so therapeutically useful reagents, as probes and for the screening of therapeutically useful reagents, as probes and for the crecombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify the proteins are useful as molecular marker for protein electrophoresis purpose that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for emmunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic cassay of sample fluids. Anti-PRO purification of PRO from recombinant cassay of sample fluids. Anti-PRO purification of PRO from recombinant cassay of sample fluids sources. The polymucle and protein and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

New nucleic acid encoding a PRO polypeptide for use as hybridization probes, in chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy for treating e.g. cancer, Parkinson's disease and wounds.

Example 36; SEQ ID NO 229; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nurcleic acid enceding them. The polypeptides can be used to raise antichem uncleic acid enceding them. The polypeptides con be used to raise antichodise that specifically bind to the PRO polypeptide for inclining a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful for modulating the biological activity of a cell properties and sample and for inclining a bioactive molecule to a cell expressing PRO polypeptides are useful for modulating the biological activity of polypeptide antibodies are useful for modulating the polypeptides or polymuclectides are useful for stimulating hypertrophy of neonatal collinearing of a cell expressing PRO polypeptides. The PRO polypeptides or polymuclectides are useful for stimulating hypertrophy of neonatal carriers or stimulated properties can be accepted to the polymuclectides are useful for stimulating hypertrophy of neonatal carriers or red plantaneous or rod phorocreceptor cells, modulating policose or FRA uprace, inducing proliferation of chondrocryes. Handle properties are useful for cells, modulating plucose or FRA uprace, inducing proliferation of chondrocryes. Inducing proliferation of chondrocryes in particular, these are useful for cells, modulating plucose or FRA uprace, inducing proliferation of chondrocryes or injuries (e.g. loss of sight due to carriers or retinate properties or injuries (e.g. loss of sight due to continuous or to appropriate or properties and their portions affect the arbitration of genes which have a role in cell for cupy library to isolate the fell. In molecular bloopy including uses as hybridisation probes are useful in molecular bloopy including uses as hybridisation probes or control of solate the fell of the properties of the protein and to a role of the process, as therapeutically useful respents of solates are useful for the properties of individuals with generic antipulate or the properties of individuals with generic an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              25-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         12-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   24-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                24-NOV-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            27-0CT-
27-0CT-
 The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucled acid encoding them. The polypeptides contribodies that specifically bind to the PRO polypeptide for linking a bioactive molecule to a cell expressing a PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptides are useful contribodies are useful for modulating the biological activity of a cell. PRO polypeptides or a cell expressing a PRO polypeptides or bolypeptides are useful for modulating the biological activity of a cell expressing a PRO polypeptides. The PRO polypeptides or polypeptides are useful for modulating the biological activity of a cell expressing as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating the proliferation of endothelial cells, modulating the proliferation of proliferation of condothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of condothelial cells, modulating proliferation of conductoreceptor cells, inducing proliferation of conductoryes. In particular, these are useful for cetinal neurons or rod photoreceptor cells, inducing proliferation of conductoryes. In particular, these are useful for cetinal induces or retained isorders or injuries (e.g. loso feight due to detecting or treating carders or injuries (e.g. loso feight due to cetinities pigmentosum), obesity, disorders (e.g. sports sinjuries or cetinities pigmentosum), obesity, disorders (e.g. sports sinjuries or ensetul in molecular biology including uses as hybridiation of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridiation of antisense RNA arrivals or thormosome and gene mapping, in the generating transgenic combinantly expression of genes which have a role in cell death. The polymucleotides are useful animals with genetic disorders as well animals or knockout animals with genetic analysis of individuals with genetic anophysis of individua
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; PCR; primer, ss; PRO; secreted; transmembrane; therapeutic; tissue typing; immunohistochemical staining; gene therapy; neonatal heart; vascular endothelial growth factor; VEGF; proliferation; endothelial cell; stimulated T-lymphocyte; retinal neuron; rod photoreceptor cell; c-fos; glucoses; PFA; chondrocyte; cardiac insufficiency disorder; wound; cancer; tumour; retinal disorder;

New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor, for chromosome mapping or for tissue

Example 36; SEQ ID NO 229; 126pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or useful as pharmaceuticals, diagnostics, biosensors or polymicleotides are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VGEP)-stimulated complexation of endothelial cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating the survival or proliferation of cells, modulating the survival or proliferation of cells, modulating cardiac insufficiency disorders, wounds, cancerous cells, modulating cardiac insufficiency disorders, wounds, cancerous cummuns, retinal disorders or injuries (e.g. sports injuries or retinitis pigmentosum), obesity, diabetes, hyperinaulinaemia, creating cardiac insufficiency disorders, wounds, carcindes arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a roole in cell death. The polymuclectides are useful in melecular biology including uses as hybridisation probes for connactive the full-length PRO cDNA or to isolate other

New secreted and transmembrane PRO polypeptides and nucleic acids, useful

WPI; 2004-081748/08.

```
and DNA, for preparing PRO polypeptides, for generating transgenic animals or knockout animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification.

The proteins are useful as molecular marker for protein electrophoresis or purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for tissue typing. PRO antibodies are useful for munohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity comprehence or province therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                            ö
in chromosome and gene mapping, in the generation of antisense RNA
                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24 - NOV -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     08-SEP-
   The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide are useful cor modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptide are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptide are useful as pharmaceuticals, diagnostics, blosensors or bloreactors. The PRO sequences can be used in gene and protein therapy. The PRO polypeptide, the agonist or antagonist or the anti-PRO antibody. The nucleic acids encoding PRO polypeptides are used as hybridisation probes for gene mapping, can tangenis are used as hybridisation probes for gene mapping. The PRO polypeptides are used as hybridisation probes for gene mapping. The PRO polypeptides are used as hybridisation or for tissue typing. The PRO polypeptides are also useful in gene therapy, may be employed as molecular weight markers for protein electrophoresis or as therapeutic and an are also useful in gene therapy, and the preparents and an are also useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                  agents. Anti-PRO antibodies are useful in diagnostic assays or for the affinity purification of PRO for recombinant cell culture or natural sources. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
 gene therapy, as molecular weight markers for protein electrophoresis, hybridization probes or as therapeutic agents.

continuon discloses isolated PNO Secreted/Crabinembrane Polypoptides and the murchact acid encoding them. The polypoptides can be used to raise antibodies that specifically bind to the PRO portpeptide for linking a bioactive molecule to a cell expressing a PRO polypeptide. The RD polypeptides are useful expressing a PRO polypeptide. The PRO polypeptides are useful expressing a PRO polypeptide. The PRO polypeptides are useful expressing a PRO polypeptide. The PRO polypeptides or bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymeticotides are useful for stimulating hypertrophy of monatal bioractors. These are useful for stimulating hypertrophy of monatal cheart, inhibiting vascular endothelial growth factor (VBGP-stimulated profileration of endothelial cells, modulating the proliferation of control profileration of control proceeptor cells inducing cries in endothelial cells. modulating the proliferation of control cells modulating proliferation of control cells inducing refers inducing proliferation of control cells. modulating the survival or proliferation of celliferentiation of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiently there are useful for cetinal induced or repeating cardiac insufficiently describes (e.g. polymental) celliferentiation of genes which have a role in cell deach. The polymented cardiac insufficient or celliferent portions affect the articular biology including uses as hybridisation probes for control genes which have a role in cell death. The polymented and cellifered cardiac insurance and gene mapping, in the generating transgenic and mains or knockout annials which have a role in cell death. The generating of therapeutically useful reagents, for generating transgenic combinantly expressing the protein and control and properses as therapeutically useful reagents, or propersed to manipais of indiv

    polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. The PRO sequences can be used in gene and protein therapy. The PRO polypeptide, the agonist or antagonist or the anti-PRO antibody can be used in the preparation of a medicament for the treatment of a condition which is responsive to the PRO polypeptide, the agonist or antagonist or the anti-PRO antibody. The nucleic acids encoding PRO polypeptides are used as hybridisation probes for gene mapping, generating transgenic animals useful in the development and screening of useful reagents, in chromosome identification or for tissue typing. The PRO polypeptides are also useful in gene therapy, may be employed as molecular weight markers for protein electrophoresis or as therapeutic agents. Anti-PRO antibodies are useful in diagnostic assays or for the sequence presented is a PCR primer which was used to amplify a PRO polymucleotide of the invention.

Sixty two isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245 or PRO1868, useful for treating psoriasis and epithelial cancers such as lung squamous cell carcinoma.

Example 36; SEQ ID NO 229; 426pp; English.

The invention is decided them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a to loactive molecule to a cell expressing a PRO polypeptide, for linking a to loactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide in the propertide at least one biological activity of a cell. PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of polypeptide antibodies are useful for modulating the biological activity of polypeptide antibodies are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endethelial growth factor (VEGP)-stimulated contributing vascular endethelial growth factor (VEGP)-stimulated contributing vascular endethelial growth factor (VEGP)-stimulated contributing or or polymerceeptor cells, inducing c-fos in endothelial cells, modulating proliferation of chondrocytes, enhancing the survival or proliferation of cellman activity and proliferation of chondrocytes. In particular, these are useful for retinal neurons or rob photoreceptor cells, inducing proliferation and/or reciting and chordrocytes. In particular, these are useful for cells, modulating glucose or PFA uptake, inducing proliferation and/or reciting in modulating glucose or PFA uptake, inducing proliferation of chondrocytes. In particular, these are useful for centuring of chondrocytes. In particular, the polymerical disponses or injuries (e.g. loss of sight due to retinities) in ammals, or bone or cartilage disorders (e.g. sports injuries or retinities) in ammals, and polymerical death. The polymerical control of genes which have a role in cell death. The polymerical control of an individuals with genetic disorders as well as for conditional, which are useful in the development and screening of therapeutically useful reagents, as probes as therapeutic analysis of individuals with genetic and part of process as therapeutic agen antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to The invention discloses isolated PRO secreted/transmembrane polypeptides defective gene. The sequence presented is a PC amplify a PRO polynucleotide of the invention.

WPI; 2004-020444/02.

New isolated secreted and transmembrane PRO nucleic acids and polypeptides, useful for preventing, diagnosing and treating disorders associated with their aberrant expression and activity.

Example 36; SEQ ID NO 229; 476pp; English.

and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polymentides can he used to raise

```
C polymuclacotides are useful as pnarmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal carbinating avacular endothelial growth factor (WEGP)-stimulated proliferation of endothelial cells, modulating the proliferation of endothelial cells, modulating the proliferation of the stimulated T-lymphocytes, enhancing the survival or proliferation of control processors in ducing proliferation of retinal neurons or rod photoreceptor cells, inducing proliferation of cells, modulating glucose or FRA uptake, inducing proliferation and/or recombination of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders wounds, cancerous cutmours, retinal disorders or injuries (e.g. loss of sight due to detecting or treating cardiac insufficiency disorders wounds, cancerous cutmours, retinal disorders or injuries (e.g. ports injuries or arthitis) in mammals. PRO polyeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular blooky including uses as hybridisation probes care useful in molecular and gene mapping, in the generation probes convince of the proposition and gene mapping, in the generation of antisense RNA and DNA, for preparing PRO polyeptides, for generation transgenic animals or knockout animals which are useful in the development and corrections of therspeutically useful reagents as probes and for the combinantly expressing the protein and for chromosome identification. The proteins are useful in molecular marker for protein electrophoresis purposes, as therapeutic adents, for screening compounds to identify the protein are useful for the protein and for chromosome identification. The proteins are useful in diagnostic assays for protein electing its correlating or purposes, as therapeutic adents, for screening compounds to identify the protein and protein and for the protein and protein and protein and protein and protein and protein and pro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-NOV-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     24-NOV-
This invention describes a novel method for lysing cells using a substance that binds to components of the cytoskeleton, especially to EF-
c substance that binds to components of the cytoskeleton, especially to EF-
c Tu (bacterial elongation factor), destabilising it. The substance binds
to domains 2 and/or 3 (respectively, amino acids 205-298 and 299-349) of
ET-tu, especially to regions 218-24, 317-328 and/or 343-354. Preferred
c EF-tu, especially to regions 218-24, 317-328 and/or 343-354. Preferred
c Inhibiting self-assembly of EF-Tu fibrils. The polymucleotide encoding
the cytoskeleton-binding substance is in a construct that also includes
the polymucleotides that induce its synthesis. The products of the
c invention are used to lyse bacteria, specifically where these are being
c used to prepare heterologous or homologous intracellular compounds,
c used to prepare heterologous or homologous intracellular compounds,
c especially proteins for biotechnological or medical applications.
C Escherichia coli cells, containing a gene that encoded the factor EF-Tu,
c were transformed with a plasmid that expressed domain 3 of EF-Tu. This
domain competes with complete EF-Tu in the formation of protofilaments
c and where incorporated it causes a strand break (it contains no domain 2,
c which is essential for chain formation). Defective protofilaments can not
c grow, so the cytoskeletal network is weakened and collapses. This removes
the support for the cytoplasmic membrane, resulting in rupture of the
c lis used in the method described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tissue typing; immunohistochemical staining; gene therapy; neonatal heart; vascular endothelial growth factor; VEGF; proliferation; endothelial cell; stimulated T-lymphocyte; retinal neuron; cod photoreceptor cell; c-fos; glucose; FFA; chondrocyte; cardiac insufficiency disorder; wound; cancer; tumour; retinal disorder; retinitis pigmentosum; obesity; diabete; hyperinsulinaemia; hypoinsulinaemia; bone disorder; cartilage disorder; sport injury; arthritis; cardiant; vulnerary; cytostatic; ophthalmological; osteopathic; antiarthritic; anorectic.
                           Inducing cell lysis with compound that binds to a cytoskeletal component, useful for recovering homologous or heterologous proteins from bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Example 36; SEQ ID NO 229; 474pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise articodises that specifically bind to the PRO polypeptide. To linking a to bioactive molecule to a cell expressing a PRO polypeptides are useful controlled expressing PRO polypeptides. The PRO polypeptides are useful controlled expressing PRO polypeptides. The PRO polypeptide articolled expressing PRO polypeptides. The PRO polypeptide articolled expressing PRO polypeptides. The PRO polypeptides or colled expressing PRO polypeptides or colled expressing PRO polypeptides. The PRO polypeptides or colled expressing PRO polypeptides. The PRO polypeptides or useful for stimulating hypertrophy of neonatal colled expressing PRO polypeptides. The PRO polypeptides or colled proliferation of endothalial cells, modulating the proliferation of endothalial cells, modulating the proliferation of endothalial cells, modulating proliferation of endothalial cells, modulating proliferation of endothalial cells, inducing proliferation of colled procreceptor cells, inducing proliferation of endothalial cells, inducing proliferation of colled colled colled proliferation of colled procreceptor cells, inducing proliferation of colled colled colled proliferation of colled co purposes, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymoleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to

New nucleic acid encoding a PRO polypeptide, useful for producing a recombinant PRO polypeptide and for treating tumors by gene therapy.

Example 36; SEQ ID NO 229; 471pp; English.

C The invention discloses isolated RNO secreted/transmembrash polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise can the invention discloses isolated RNO secreted/transmembrash for inhiding a bloative molecule to a cell expressing a PRO polypeptide for inhiding a condition other PRO polypeptides in a sample and for linking a bloative molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful as pharmaceuticals, diagnostics, biosensors or polypeptides are useful in paramaceuticals, diagnostics, biosensors or polypeptides are useful as pharmaceuticals, diagnostics, biosensors or polypeptides are useful as pharmaceuticals, diagnostics, biosensors or polymelocides are useful appraismenticals, diagnostics, biosensors or proliferation of endothelial cells, modulating the proliferation of endothelial cells, modulating the proliferation of endothelial cells, inducing proliferation of endothelial cells, inducing proliferation and/or cells, modulating diacose or FRA uptaske, inducing proliferation and/or cells, modulating or treating cardiac insufficiency disorders, wounds, cancerous cells, modulating or bone or cartiloge disorders, hyperinsulation of chondrocytes, inquiries (e.g. loss of sight due to creintis pigmentosum) obesity, diaberes, hyperinsulinaemia, hypoinaulinaemia, or bone or cartiloge disorders (e.g. loss of sight due to creintis pigmentosum) obesity, diaberes, hyperinsulinaemia, chopy including use as hybridisation probes or crimitis pigmentosum) obesity, diaberes, hyperinsulinaemia, chopy including use as hybridisation probes or crimitis pigmentosum) obesity, diaberes, hyperinsulinaemia, and of certaperating PRO polypeptides, for generating transgenic and mals or knockout animals which are useful in the generation of antisense RNA are suffered in molecular bology including use as hybridisation process, as theraputic agents, for screening of theraperating PRO polypeptides, for generating transgenic and public cannysis of individ The invention discloses isolated PRO secreted/transmembrane polypeptides defective gene. The sequence presented is a posemplify a PRO polynucleotide of the invention.

Isolated secreted and transmembrane PRO nucleic acids and the proteins they encode, e.g. PRO245, PRO269 and PRO1868, useful for preventing, diagnosing and treating e.g. disorders relating to blood coagulation.

Example 36; SEQ ID NO 229; 478pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating a conference on other PRO polypeptides in a sample and for linking a conference of the properties of the properties are useful conference of a cell expressing PRO polypeptides or the PRO polypeptides or coll expressing PRO polypeptides or collection of collection of collection of collection and collection of collection collection collection of collection of collection collection collection collection of collection col

and DNA, for preparing PRO polypeptides, for generation of antisense RNA animals which are useful in the development and screening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify those that miniar the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. The polymucleotides and proteins are useful for tissue typing and/or assay of sample fluids. Anti-PRO antibodies are useful for antibodies are useful for captession in specific cells, tissues or serum and for affinity expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polymucleotide of the invention.
cDNA library to isolate the full-length PRO cDNA or to isolate other

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or

Disclosure; SEQ ID NO 229; 428pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nutcleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide. For linking a cariobacise that specifically bind to the PRO polypeptide. For linking a taleast one blooks are useful for a cell sepressing a PRO polypeptide The PRO polypeptide antibodies are useful for modulating the biological activity of a cell. FRO polypeptide antibodies are useful for modulating the biological activity of a cell. FRO polypeptide on the PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptide in the PRO polypeptide antibodies are useful for modulating properties, biosensor or polymuclectides are useful for stimulating hypertrophy of meaners or polymuclectides are useful for stimulating hypertrophy of meaners or polymuclectides are useful for stimulating proliferation of chondrocytes, inducing proliferation of chondrocytes, inducing proliferation of chondrocytes, inducing proliferation of chondrocytes. In particular, these are useful for calification of chondrocytes. In particular, these are useful for calification of chondrocytes or injuries (e.g. loss of sight due to creintain or dense which have a rote in media. Propring the creinties promines are useful in molecular hology including uses as hybridisation probes or prepagation of genes which have a rote in call death. The polymuclecties are useful in molecular hology including uses as hybridisation probes or on DNA, in chromosome and gene mapping, in the generating rangement and control of the properties are useful in molecular hology including uses as probes and for the generating repetition of chondrocyte animals or knockout animals which are useful in the development and gene mapping, in the generating cranged canneral or recombinantly expressing the protein and for chromosome and gene mapping or creaming one protein are useful as molecular marker for protein electrophores; or

Isolated nucleic acid for making vector for host cell, comprises specified sequence identity to nucleotide sequence that encodes polypeptide having amino acid sequence.

Example 36; SEQ ID NO 229; 470pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide, for linking at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF) estimulated proliferation of endothelial cells, modulating the proliferation of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           24-NOV-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-SEP-
                                                                                                                                                                                                                                                                                                                      28-OCT-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-NOV-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-NOV-
                                                                                                                                                                                                                                                                                                                                                   28-0CT-
                                                                                                                                                                                                                                                                                                                                                                                                                         29-OCT-
                                                                                                                                                                                                                                                                                                                                                                                                          29-OCT-
       cells, modulated T-lymphocytes, enhancing the survival or proliferation of cells, inducing c-fos in endothelial calls, modulating glucose or FRA uptake, inducing c-fos in endothelial calls, modulating glucose or FRA uptake, inducing proliferation and/or reclifferentiation of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous turnurs, retinal disorders or injuries (e.g. 10ss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides care useful in molecular biology including uses as hybridisation probes of for companient of genes which have a role in cell death. The polymucleotides companient of companient and DNA, for preparing PRO polypeptides, for generation of antisense RNA and DNA, for preparing PRO polypeptides, for generation of antisense RNA and DNA, for preparing PRO polypeptides, for generation of antisense and DNA, for preparing PRO polypeptides, for generation of therapeutically useful reagents, as probes and for the generic analysis of individuals with genetic disorders as well as for recombinantly expressing the protein and for chromosome identify contropes, as therapeutic agents, for screening compounds to identify the proteins are useful for tissue typing. PRO antibodies are useful in diagnostic assay of sample fluids. Anti-PRO contibodies are useful in diagnostic assay of sample fluids. Anti-PRO pulyingenes may also be used in gene therapy, particularly for replacing a general part presented is a PCR primer which was used to mplify a pRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; PCR; primer; ss; PRO; secreted; transmembrane; therapeutic; tissue typing; immunohistochemical staining; gene therapy; neonatal heart; vascular endothelial growth factor; VEGF; proliferation; endothelial cell; stimulated T-lymphocyte; retinal neuron; rod photoreceptor cell; c-fos; glucose; FFA; chondrocyte; cardiac insufficiency disorder; wound; cancer; tumour; retinal disorder; retinitis pigmentosum; obesity; dabete; hyperinsulinaemia; hypoinsulinaemia; bone disorder; cartilage disorder; sport injury; arthritis; cardiant; vulnerary; cytostatic; ophthalmological; osteopathic; antiarthritic; anorectic.

Ferrara N; NE, Goddard A; Kljavin IJ; Tumas D; The invention discloses isolated PRO secreted/transmembrane polypeptides and the mucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating to the asset one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides are useful for detecting other PRO polypeptides. The PRO polypeptides are useful submardeuticals, diagnostics, biosensors or bioactors. These are useful for stimulating hypertrophy of neonatal proliferation of bioreactors. These are useful for stimulating hypertrophy of neonatal proliferation of cheart, inhibiting vascular endothelial growth factor (VBGF) estimulated proliferation of endothelial growth factor (VBGF) estimulated proliferation of endothelial growth factor (VBGF) estimulated proliferation of chondrocytes, inducing c-fos in endothelial cells, modulating glucose or FRA uptake, inducing proliferation of endothelial cells, inducing proliferation of endothelial growth factor (VBGF) estimulated cumours, retinal disorders or injuries (e.g. loss of sight due to cells, modulating glucose or FRA uptake, inducing proliferation moderolar brone or cartilage disorders (e.g. loss of sight due to cetting or treating cardiac insufficiency disorders (e.g. loss of sight due to cretinists) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes or businals or knockout animals which are useful in the development and gene mapping, in the generation of antisenes RNA animals or knockout animals which are useful in the development and gene mapping, in the generation transgenic contening of therapeutically useful reagents, so process as therapeutic aspects and DNA, for preparing PRO polypeptide antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a

Sixty one isolated nucleic acids encoding a PRO polypeptide, e.g. PRO245

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specificially bind to the PRO polypeptide for linking a cariobodies that specificially bind to the PRO polypeptide. The PRO polypeptide of the condulating at least one biological activity of a cell. PRO polypeptides are useful for modulating the biological activity of solypeptides are useful for modulating the biological activity of polypeptides are useful for modulating the biological activity of conducting the biological activity of polypeptides are useful for modulating the biological activity of polypeptides are useful for stimulating hypertrophy of meaners of polymucleotides are useful for stimulating hypertrophy of meaners of polymucleotides are useful for stimulating proliferation of candidating glucose or FRP uptack, inducing proliferation of redinating glucose or FRP uptack, inducing proliferation of chondrocytes. In particular, these are useful for cells, modulating glucose or FRP uptack, inducing proliferation of chondrocytes or inputicis or repeasing cardiac inputies (e.g. loss of sight due to cells, modulating glucose or FRP uptack. Inducing proliferation of chondrocytes or inputicis (e.g. loss of sight due to cells, modulating plucose or FRP uptack. Appring proliferation of chondrocytes or inputicis (e.g. sports injuries or arthritis) in mammals. PRO polypeptides and their portions affect the cerinitis of genes which have a role in cell cells, modulating plucose or cartilage disorders wounds, cancerous tumours, retinal disorders or injudy useful respectives and their portions and provides and problem or cartilage disorders as which have a role in cell for cond library to cisclate the full-length RRO colls, or some proper and publy, for preparing RRO polypeptides, for generating respective provides and provides and publy for preparing RRO polypeptides, for generating cells, inducing seems and publy or crossing the procein and for riseus t .. 0 or PRO1868, useful in chromosome and gene mapping, in generating antisense RNA and DNA, and in treating cancer and Alzheimer's disease. Gaps .. 0 / Match 0.4%; Score 14.4; DB 1; Length 18; Local Similarity 93.8%; Pred. New PRO nucleic acid, useful for preparing a composition for treating tumor or for tissue typing e.g.,

Example 36; SEQ ID NO 229; 472pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating a confective molecule to a cell expressing a PRO polypeptides are useful confective molecule to a cell expressing a PRO polypeptides are useful confective molecule to a cell expressing a PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptide or collective are useful for stimulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymcleotides are useful for stimulating hypertrophy of neonatal collective inhibiting vascular endothelial growth factor (VEGP)-stimulated collection of endothelial cells, modulating the proliferation of collective inhibiting glucose or FPA uptake, inducing coliferation of collection of chondrocytes. In particular, these are useful for cells, modulating proliferation and/or recolls, modulating proliferation and/or recolls, modulating proliferation of chondrocytes. In particular, these are useful for cells, modulating proliferation of chondrocytes. In particular, these are useful for cells, modulating proliferation of chondrocytes. In particular, these are useful for cells, modulating proliferation of chondrocytes. In particular, these are useful for cells, modulating proliferation of chondrocytes. In particular, these are useful for cells, modulating proliferation and/or reconsecting or treating or treating cardiac insufficiency disorders, wounds, cetting the conferons or injuries (e.g. loss of sight due to cetting in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynuclees or cartilage disorders (e.g. sports injuries or expression of genes which have a role in cell death. The polynuclees

New antibodies binding PRO polypeptides, useful in gene therapy, or in diagnostic assays for the PRO polypeptides, or for the affinity purification of PRO polypeptides from recombinant cell culture or natural

Example 36; SEQ ID NO 229; 445pp; English.

The invention relates to an antibody that binds to a human PRO

The invention describes an isolated polypeptide (I) comprising a cids as given in the specification or a region consisting of 5 or more contiguous amino acids, where the region includes amino acid of 634 of contiguous amino acids, where the region includes amino acid of 634 of thily defined sequence (82) of 2405 base pair as given in the specification, or its complement, a polymucleotide (II) comprising a fully defined sequence (82) of 2405 base pair as given in the specification, or its complement, a polymucleotide that selectively hybridizes to (82) relative to a known polymucleotide, or a region of 15 or more contiguous mucleotides, the region comprising nucleotide 1904 of (82); vector, preferably an expression vector (III) comprising of (11); a chost cell (IV) comprising (II); a leter sample; detecting observe or observer or chatted disorders associated with differential expression of (II); a LIPINN controlled of (IV) or (VI), where the region is 10 or more comprising a detecting a level of expression of (V) or (VI), where the region is 10 or more comprising to (II); an ecombinant cell sample; antibodies that specifically bind to (I); a recombinant cell sample; antibodies that specifically such that the (II) is overexpressed; a composition comprising (I); an array comprising two or more (III); and identifying an alteration in IIPINN gene associated with obesity or an obesity related disorder. (II) ö polypeptide. The invention also relates to human PRO polynucleotides encoding the PRO polypeptides of the invention. The antibody is a monoclonal or humanised antibody, or is an antibody fragment, and is preferably labelled. The anti-PRO antibodies may be used in diagnostic assays for PRO, or for the affinity purification of PRO from recombinant cell culture or natural sources. This sequence represents a PCR primer used in isolation of a human PRO polynucleotide of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAQ93237-40 are primers which were used in the amplification of a gene fragment from the acetyl CoA carboxylase (ACCase) gene. The full length ACCase gene may be used to produce a transgenic plant such that it expresses a changed amount of ACCase. The ACCase gene may be used to regulate the production of fat/protein in agricultural
is useful for detecting a polynucleotide polymorphism associated with obesity. (II) is useful for diagnosing obesity an obesity-related disorder which involves detecting (I). In (MZ), the cell is an adipocyte. The test agent is chosen from antibody, protein, nucleic acid, and small organic molecule. This sequence represents a primer used to identify single nucleotide polymorphisms in the human Lipin3 gene that may be associated with obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polymerase chain reaction, PCR, primer; amplify, acetyl CoA carboxylase, ACCase, transgenic plant, regulation, fat, protein, agricultural plant,

```
Contraining a Human immunodeficiency virus (HIV) homology region and a cellular regulatory factor. Defibriotide is a polyanion salt of a decoxythomology region and a cellular regulatory factor. Defibriotide is a polyanion salt of a decoxythomology region and a cellular regulatory factor. Defibriotide is a polyanion salt of a decoxythomology region and a cellular regulatory factor. Defibriotide is a polyanion salt of a decoxythomology of the products can be used for treating diseases such as infection e.g. Schistosoma infection, protozoan infection, schistosoma infection, protozoan infection, schistosoma infection e.g. Schistosoma infection, and fungus infection, pneumocystis carini infection, malaria, plasmodium vivax, gram negative bacterial infection, infection, infection, departitis virus infection, human papilloma virus infection; genetic diseases e.g. buchenne's muscular dystrophy and virus infection; genetic diseases e.g. buchenne's muscular dystrophy and virus infection; genetic diseases e.g. neuropathy, cardiomyopathy, aging, Kearn's Sayre syndrome, retinitis pigmentosa, ataxia, seizures, adiseases, parkinson's disease, neuropathy, cardiomyopathy, aging, Kearn's Sayre syndrome, retinitis pigmentosa, ataxia, seizures, consuritis, and radiation damage; neoplasia, e.g. lympho-proliferative consuritis, and radiation damage; neoplasia, e.g. lympho-proliferative angiomatosis, seborrheic dermatitis, psoriasis, Reiter's syndrome, insect colon cancer; and skin diseases, e.g. molluscum contegiosum, bacillary angiomatosis, seborrheic dermatitis, psoriasis, Reiter's syndrome, insect bite reaction, Staphylococcal folliculitis, Ecosinophilic folliculitis. In addition a drug resistance can be treated via administering the nucleic acid components of defibrotide and the variants in combination with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a hairpin or hammerhead ribozyme, designed to cleave RNA encoding a cyclin or cell-cycle dependent kinase other than cell-cycle dependent kinases CIKI, pcNA and Cyclin B1. Representative examples of ribozyme recognition sites are given in AAA82415 to AAA86787. The ribozyme of the invention is useful for inhibiting restenosis by introduction of the ribozyme into cells. The ribozyme is resistant to endonuclease activity and hence is efficient in
                                                                                                                                            Ribozyme; hairpin; hammerhead; gene therapy; vasotropic; restenosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                               New hairpin and hammerhead ribozyme for inhibiting restenosis, cleaves RNA encoding a cyclin or cell-cycle dependent kinase other than CDK1, PCNA and Cyclin B1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

performance recovered to the presence for prince of a full control of primers of a full control of primers. The present invention sites of single nucleotide polymorphisms SNPs. The present invention includes kits for determining the presence or absence of a SNP, using the includes kits for determining the presence or absence of a swip using the coligonucleotides of the invention. The PCR primers are used to amplify a coliforning as a ser useful for genotryping a nucleic caid sample by performing a single-nucleotide primer extension reaction. The performing a single-nucleotide primer extension reaction. The cligonucleotides are useful for determining the presence, absence or identity of a SNP and for genotype of an individual or group of sesses by association analysis the genotypic of an individual or group of individuals, having a pathological phenotypic trait suspected of being caused by one or more SNPs. Phenotypic traits include diseases e.g. capsembly familial hypercholesterolaemia polycystic kidney disease, dystrophy, familial hypercholesterolaemia, polycystic kidney disease, or steogenesis imperfects and acute intermittent porphyria. Phenotypic traits also include symptoms of or may be genetic such as autoimmune disease of which a component is or may be genetic such as autoimmune inflamment, inflamment, who may never intermitent prompt infertion hyperhorial activities multiple sclerosis, inflamment, and a such as autoimmune inflamment of inflamment in partner and a second second inflamment in the partner and a second second inflamment in the partner of a second inferior and a second second inflamment in the partner of a second 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .

                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for treating a proliferative skin or eye disease and scarring. The method involves administering a ribozyme (I) which cleaves RNA encoding a cytckine involved in inflammation, matrix metalloproteinase (MMP), cyclin, call-cycle dependent kinase, growth factor or a reductase, or administering a nucleic acid molecule (II) comprising a promoter operably linked to a concleic acid segment encoding (I). (I) can have antipsoriatic, dermatclogical, cytostatic, antiseborrheic, antidiabetic, antisickling, ophthalmological, vulnerary, keratolytic and virucide activities, and cleaves RNA encoding cytokine involved in inflammation. (I) can be used in gene therapy. (I) and (II) are useful for treating proliferative skin diseases such as psoriasis, atopic dermatitis, actinic keratosis, squamous or basal cell carcinoma and viral or seborrheic wart. They can also be used for treating proliferative eye diseases such as diabetic retinopathy, vitreoretinopathy, aickle cell retinopathy of prematurity and retinal detachment, and for treating and preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                          Treating proliferative skin or eye diseases and scarring, using ribozymes that cleave RNA encoding cytokines involved in inflammation, matrix metalloproteinases, growth factors and cell-cycle dependent kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   d hypertrophic or hypertrophic burn

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human c-fos gene by RNA interference. The siNAs may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and antisense cligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes for the in vitro or in vivo delivery of siNA; conjugates and/or complexes corpuses in calls, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the reatment of a variety of conditions. They may be used for treating central nervous system lesions and injurise (e.g., Alzheimer's disease, Huntington's disease, epilepsy, dementia or myotrophic lateral sclerosis), various cancers; other proliferative and/or allergic diseases; viral infections (including HIV infection);
central nervous system disorder; Alzheimer's disease; Parkinson's disease; Huntington's disease; epilepsy; dementia; amyotrophic lateral sclenosis; cancer; proliferative disease; restenosis; polycystic kidney disease; inflammatory disease; allergic disease; viral infection; HIV infection; autoimmune disease; transplant rejection; vasorropic; nocroropic; antiparkinsonian; neuroprotective; cytostatic; antinflammatory; antiallergic; virucide; anti-HIV; immunosupressive; anticonvulsant; nephrotropic; human; c-fos; target sequence; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the upper strand of a human c-fos-
targeted double-stranded siNA, which is identical to the c-fos transcript
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New short interfering nucleic acid downregulates expression of the c-fos gene useful for treatment and diagnosis of diseases, e.g. cancer and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           autoimmune diseases, and transplant rejection. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human c-fos gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense algonucleotide and an antisense oilgonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically synthesised, expressed from a coctain decoxyribonucleotide, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits of the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the c-fos gene in cells, tissue explants or organisms of since avariest of conditions. They may be used for treating central nervous system lesions and injuries (e.g., Alzheimer's disease, Extracting central nervous system lesions and injuries (e.g., Alzheimer's disease, Rathinson's disease, Huntington's disease, epilepsy, dementia or amyotrophic lateral sclerosis); various cancers; other proliferative
                                                                                                                                                                                                                                                                       RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; mirnA; short hairbin RNA; siRNA; cxpression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; central nervous system disorder; Alzheimer's disease; parkinson; disease; hartington's disease; pliepsy; dementia; amyotrophic lateral sclerosis; cancer; proliferative disease; restenosis; polycystic kidney disease; inflammatory disease; allergic disease; viral infection; HVI infection; autoimmune disease; transplant resjection; vascircipic; noctropic; antiparkinsonian; neuroprotective; cytostatic; anticonvulsant; nephrotropic; human; c-fos; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New short interfering nucleic acid downregulates expression of the c-fos gene useful for treatment and diagnosis of diseases, e.g. cancer and inflammation.

Also described: (1) modulating expression of SCD genes in cells, tissue explants or organisms by introduction of siNA; kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA, and (4) vectors that express siNA. SCD inhibiting siNAs have anorectic, antidiabetic, antiatreriosclerotic, cytostatic and virucide activities. The siNAs can be used to modulate expression of SCD
diseases (e.g., restenosis and polycystic kidney disease); inflammatory and/or allergic diseases; viral infections (including HIV infection); autoimmune diseases; and transplant rejection. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene the present sequence represents the lower strand of a human c-fostargeted double-stranded siNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  short interfering nucleic acid; siNA; dównregulation; inhibition; SCD; stearcyl-CoA desaturase; RNA interference; anorectic; antidiabetic; antiatreiosclerotic; cytostatic; virucide; obesity; diabetes; atherosclerosis; cancer; viral infection; drug screening; genetic engineering; pharmacogenomic; gene mapping; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TIDE STATE OF THE 
                                                                                                                                                                                                                                                                                                                                                                                                                         ö
genes, in cells, tissue explants or organisms, e.g. for treating obesity; diabetes (types I and II); atherosclerosis; cancer and viral infections. They can also be used for drug screening; diagnosis; target identification and validation; genetic enquineering; pharmacogenomics; studying gene function and spene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents an SCD siNA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a short interfering nucleic acid (siNh) that downregulates expression of the SCD (stearoyl-CoA desaturase) gene by RNA interference. Also described: (1) modulating expression of SCD genes in cells, tissue explants or organisms by introduction of siNA; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; and (4) vectors that express siNA. SCD inhibiting siNAs have anorectic, antidiabetic, antiatreriosclerotic, cytostatic and virucide activities. The siNAs can be used to modulate expression of SCD genes, in cells, tissue explants or organisms, e.g. for treating obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    short interfering nucleic acid; siNA; downregulation; inhibition; SCD; stearoyl-COA desaturase; RNA interference; anorectic; antidiabetic; antidiatericsclerotic; cytostatic; virucide; obesity; diabetes; atherosclerosis; cancer; viral infection; drug screening;

diabetes (types I and II); atherosclerosis; cancer and viral infections. They can also be used for drug screening; diagnosis; target identification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents an SCD siNA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New double-stranded interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer, downregulates the vascular endothelial growth
                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human VEGFR2 short interfering nucleic acid (siNA) SEQ ID NO:1366

endothelial growth factor receptor (VEGFR) gene. Also described: (1) a sink that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of sink; (3) conjugates and/or complexes of sink; (4) vectors that express sink; and (5) single-stranded sink with similar properties. The sinks have antiangiogenic, cytostatic, antidiabetic, ophthalmological, antiarthritic, antipsoriatic, nephrotropic and cativities. The sink are useful for modulating (downregulating) the expression of VEGFR genes. The sink are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The sink may also be useful for diagnosis, drug exceening, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The present invention describes a double-stranded short interfering nucleic acid (sinA) that downregulates expression of the vascular endothelial growth factor receptor (WGGFR) gene. Also described: (1) a caid that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of sinA; (3) conjugates and/or complexes of sinA; (4) vectors that express sinA; and (5) single-stranded sinA with similar properties. The sinAs have antianspicognia, cytostatic, nephrotropic and gynaecological activities. The sinA are useful for modulating commanded sinAs are useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, particularly cancers, diabetic retinopathy, macular degeneration, consovantic kidney disease. The sinA may also be useful for diagnosis, and polycystic kidney disease. The sinA may also be useful for diagnosis, and sories strains, studying gene function, and also for gene mapping (e.g. of single-incleants). The present sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           short interfering nucleic acid; SiNA; downregulation; vascular endothelial growth factor receptor; VEGFR; antiangiogenic; cytostatic; antidiabetic; ophthalmological; antiarthritic; antipsoriatic; antidiabetic; approximation; and propertions; and gradional and gradional antihities; portable; and degeneration; neovascular glaucoma; polycystic kidney disease; ss.

The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular endotherial growth factor receptor (VEGFR) gene. Also described: (1) a sinA that downregulates the VEGF gene. (2) kits for in vitro or in vivo delivery of siNA, (3) conjugates and/or complexes of siNA, (4) vectors that express siNA, and (5) single-stranded siNA with similar properties. The siNAs have antiangiogenic, cytostatic, antidiabetic, ophthalmological, antiarthritic, antipsoriatic, nephrotropic and gynaecological activities. The siNA are useful for modulating (downregulating) the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, and polycystic kidney disease. The siNA may also be useful for diagnosis, angineering, studying gene function, and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of single-nuclectide polymorphisms). The present sequence is used in the exemplification of the present invention.

The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: (1) a siNA that downregulates the VEGF gene, (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties. The siNAs have antianglogenic, cytostatic, antidabetic, ophthalmological, antiarthritic, antipsoriatic, nephrotropic and gynaecological activities. The siNA are useful for modulating (downregulating) the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, and polycystic kidney disease. The siNA may also be useful for diagnosis, and polycystic kidney disease. The siNA may also be useful for diagnosis, drug screening, target identification and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of engine-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                       New double-stranded interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer, downregulates the vascular endothelial growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; Myc; Myb; cancer; proliferative disease; restenosis; polycystic kidney disease; RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA, adouble-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression modulation; gene therapy; drug screening; diagnosis;

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human Myc or Myb genes by RNA interference. The siNAs may or may not comprise ribonuclecides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonuclecide and antisense oligonuclecide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonuclectides, and can be chemically synthesised, can contain deoxyribonuclectides, and can be chemically synthesised, can complexes of siNA, and vectors that express siNA. The siNAs are used to modulate expression of the Myc or Myb genes in cells, tissue caplants for the in vitro or in vivo delivery of siNA, conjugates and/or complexes of siNA, and vectors that express siNA. The siNAs are used to modulate expression of the Myc or Myb genes in cells, tissue caplants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancers and other proliferative diseases, such as restenosis and polycystic kidney disease. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the lower strand of a human Myb-targeted double-stranded siNA.

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human Myc or Myb genes by RNA interference. The siNAs may or may not comprise ribonuclectides and may be double or single stranded. They further comprise sense and antisense of cregions, or alternatively are assembled from a sense oligonuclectide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short contain deoxyribonucleotides, and can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, can contain deoxyribonucleotides, and can be chemically synthesised, can complexes of siNA, and vectors that express siNA. The siNAs are and/or complexes of siNA, and vectors that express siNA. The siNAs are captaints or organisms (e.g., by ex vivo gene therapy), or in grafts and captaints for the treatment of a variety of conditions. They may be consed for modulates expression of the Myc or Myb genes in cells, tissue captaints for the treatment of a variety of conditions. They may be consed for treating cancers and other proliferative diseases, such as createness and polycystic kidney disease. The siNAs are also useful for drug screening, denetic engineering, pharmacogenomics, studying gene containts sequence represents the upper strand of a human Myb-targeted containers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

sinA of the invention has cytostatic, immunosuppressive, virucide, and anti-HIV activity. The sinA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. sinA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, pharmacogenomics, genetic engineering, pharmacogenomics, studying gene function and gene mapping e.g. of single-nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143 represent sinA of the invention.
                                                                                                                                                                                                                                                                                                                                                                            ss; siNA; human; BCL2; short interfering nucleic acid; RNA interference; cytostatic; immunosuppressive; virucide; anti-HIV; cancer; autoimmune disease; viral infection; HIV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New short interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer or autoimmune disease, downregulates expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel short interfering nucleic acid (siNA) that downregulates expression of the BCL2 gene by RNA interference. The invention relates to a novel short interfering nucleic acid (siNA) that downregulates expression of the BCL2 gene by RNA interference. A siNA of the invention has cytostatic, immunosuppressive, virucide, and anti-HIV activity. The siNA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. SiNA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, traget identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New short interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer or autoimmune disease, downregulates expression of the BCL2 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Protein tyrosine phosphatase type IV (PRL3) gene siNA, SEQ ID No 138.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel short interfering nucleic acid (siNA) that downregulates expression of a protein tyrosine phosphatase type IV (PRL3) gene by RNA interference. The invention further relates to modulating the expression of PRL3 genes in cells, tissue explants or organisms by the introduction of an siNA, kits for in vitro or in vivo delivery of an siNA, conjugates and/or complexes of siNA, and vectors that express siNA. The novel siNA's of the invention have cytostatic activity. siNA's are used to modulate expression of PRL3 genes, in cells, tissue explants or organisms, e.g. for treating cancer but also for drug screening; diagnosis; target identification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). This polymucleotide sequence represents a short interfering nucleic acid for downregulating the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    short interfering nucleic acid; siNA; prL3; RNA interference; cytostatic; cancer; ss.

The invention relates to a novel short interfering nucleic acid (siNA)
that downregulates expression of a protein tyrosine phosphatase type IV
(PRL3) gene by RNA interference. The invention further relates to
modulating the expression of PRL3 genes in cells, tissue explants or
organisms by the introduction of an siNA; kits for in vitro or in vivo
delivery of an siNA; conjuages and/or complexes of siNA; and vectors
that express siNA. The novel siNA; of the invention have cytostatic
activity. siNA's are used to modulate expression of PRL3 genes, in cells,
tissue explants or organisms, e.g. for treating cancer but also for drug
screening; diagnosis; target identification and validation; genetic
engineering; pharmacogenomics; studying gene function and gene mapping
(e.g. of single-nucleotide polymorphisms). This polymucleotide sequence
represents a short interfering nucleic acid for downregulating the
expression of a protein tyrosine phosphatase type IV (PRL3) gene of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human GAB2 short interfering nucleic acid upper sequence SEQ ID NO:292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; human; GRB2-associated binding protein; GAB2; cancer; inflammation; allergy; chromosome 11; cytostatic; antiinflammatory; antiallergic; target sequence; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                     sequence.
```

```
The present invention relates to short interfering nucleic acids (siNA)
which downregulate expression of the human GRB2-associated binding
comprise in (GAB2) gene by RNA interference. The siNAs may or may not
comprise ribonucleotides and may be double or single stranded. They
further comprise sense and antisense regions, or alternatively are
ssembled from a sense oligonucleotide and an antisense oligonucleotide.
Specifically, the siNAs include short interfering RNA (siRNA), double-
stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs
can be unmodified or chemically modified, can contain
deoxyribonucleotides, and can be chemically synthesised from a
vector or enzymatically synthesised. The invention also relates to kits
correct or enzymatically synthesised. The invention also relates to kits
for the in vitro or in vivo delivery of siNA; conjugates and/or complexes
of siNA; and vectors that express siNA. The siNAs are used to modulate
expression of the GAB2 gene in cells, tissue explants or organisms (e.g.,
by ex vivo gene therapy), or in grafts and transplants for the treatment
of a variety of conditions. They may be used for treating cancer,
inflammation and allergies. The siNAs are also useful for drug screening,
diagnosis, therapeutic target identification and validation, genetic
engineering, pharmacogenomics studying gene function, and gene mapping
(e.g., of single nucleotide polymorphisms). The human GAB2 tergeted
controm or hromosome 11, more specifically to region 11q13.4 The human
GAB2 sinNa have cytostatic, antinflammatory and antiallergic activities.
The present sequence represents the upper strand of a human GAB2-targeted
double-stranded sinN, which is identical to the GAB2 transcript target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Seguence 19 BP; 3 A; 4 C; 8 G; 0 T; 4 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The present invention relates to short interfering nucleic acids (siNA)
which downregulate expression of the human GRB2-associated binding
comprise infoRAE) gene by RNA interference. The siNAE may or may not
comprise ribonuclectides and may be double or single stranded. They
further comprise sense and antisense regions, or alternatively are
comprise sense and antisense regions, or alternatively are
further comprise sense and antisense regions, or alternatively are
comprise sense and antisense regions, or alternatively are
stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA), double-
stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAE
compositionally synthesised, can contain
deoxyribonuclectides, and can be chemically synthesised, expressed from a
vector or enzymatically synthesised. The invention also relates to kits
corporate in vitro or in vivo delivery of siNA; conjugates and/or complexes
of siNA; and vectors that express siNA. The siNAS are used to modulate
expression of the GAB2 gene in cells, tissue explants for the treatment
complexed to modulate to a since the complexes of a variety of conditions. They way be used for treating cancer,
inflammation and allergies. The siNAS are also useful for drug screening,
diagnosis, therapeutic target identification and validation, genetic
complexed on chromosome 11, more specifically to region 11q13.4. The human

```
The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the one or more telomerase genes by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short interfering RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates concluded expression of the telomerase genes in calls, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases.
                                                                                                                                                                                                                                                                          Cytostatic; vasotropic; protozoacide; immunosuppressive; dermatological; neuroprotective; anti-HIV; ophthalmological; antiulcer; antirheumatic; antiarthritic; antiinflammatory; gene therapy; telomerase; human; terc; RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression medulation; gene therapy; drug screening; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; TERC; TERT; ss.

The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; vasotropic; protozoacide; immunosuppressive; dermatological;

The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nuclectide polymorphisms). The present sequence represents the lower strand of a human TERT-targeted double-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Selecting genetic markers as targets for nucleic acid sequence amplification, useful for improving genetic testing, e.g. fetal sex determination, comprises selecting each of the genetic markers according to a heterozygosity index.
used to modulate expression of the telomerase genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Selection and amplification of genetic markers PCR related primer #14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

```

The invention describes a method of selecting genetic markers as targets for nucleic acid sequence amplification comprising selecting each of the genetic markers according to a heterozygosity index of 0.5 or greater. Selecting and amplification of genetic markers are useful as targets for nucleic acid sequence amplification, for genetic testing or facilitating multiplex PCR amplification from limiting amounts of target nucleic acid. The methods are also useful for improving genetic diagnostic and screening methods, such as prenatal diagnostic testing, foetal sex determination or genetic identification, e.g. DNA profiling or DNA fingerprinting. The nucleic acid sequence amplification is also useful in

The present invention relates to a method of determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder. The method comprises determining the genotype with at least one marker of at least one chromosomal region linked to a locus associated with resistance to bipolar affective disorder, where the chromosomal regions are included of and localised between D45402 and D45404, or D118394 and D11829. The invention also disoloses a kit for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder, where the ckt comprises markers for two or more of the chromosomal regions cited. The method and kit are useful for determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder in a family affected by bipolar affective disorder contribution of these chromosomal regions to bipolar affective disorder in an affective family member, and for assessing an increased or decreased risk of developing bipolar illness for a tested individual from the research invantion.
                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Determining a genotype associated with increased or decreased resistance to familial bipolar affective disorder in a family comprises determining the genotype of e.g., chromosomal regions D4S402 and D4S424.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, genotype determination, familial bipolar affective disorder, chromosomal region linked; locus associated with resistance; D4S402; D4S424; D4S431; D4S404; D11S394; D1S29; chromosome marker; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human familial bipolar affective disorder chromsome marker primer #230.

monutage the expression of a new carget gate in a cell, tisher or monitare the expression of a new corganism; and (v) a method for synthesising a sink molecule. The sink molecule is adapted for use to treat HBV infection, and comprises a sense and an antisense region, where the antisense region comprises sequence encoding HBV and the sense region complementary to the antisense region. The sink molecule is assembled from 2 nucleic acid fragments, where one fragment comprises the antisense region of the sink molecule, where sense region and the antisense region comprise separate oligonucleotides, and are covalently connected via a linker molecule. The linker molecule is a polynucleotide linker or a non-nucleotide linker. The sense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal overhang are region such the sense region comprises a 3'-terminal overhang is complementary to RNA encoding HBV. The sink is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of any also be used in clinical, industrial, environmental, agricultural and or the function analysis. The sink molecules and or research settings. The present sequence represents 1 of 1504 HBV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA conterference or that inhibite HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a tissue explant; (ii) a method of generating a library of siNA constructs complexity; (iii) a cell containing one or more siNA molecules; (iv)a kit containing a siNA molecule which can be used to modulate the expression of a HBV target gene in a cell, tissue or conjanism, and (v) a method for synthesising a siNA molecule. The siNA molecule is adapted for use to treat HBV infection, and comprises a sense conjementary to a method for synthesising a siNA molecule. The siNA complementary to an RNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region comprises the molecule is assembled from 2 nucleic acid fragment comprises the complementary to the antisense region and the second fragment comprises the antisense region of the siNA molecule. The linker molecule is a polynucleotide intisense region of the siNA molecule. The linker molecule is a polynucleotide contisense region of the siNA molecule. The linker molecule is a polynucleotide contisense region of the siNA molecule. The linker molecule is a polynucleotide contisense region of the siNA molecule. The linker molecule is a polynucleotide contisense region of the siNA is useful for treating benefity to determine the function of uncharacterised genes in a pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function continue and vernal surface in gene function analysis. The siNA molecules in an action may also be used in clinical, industrial, environmental, agricultural condition of the invantion environmental of the invantion environment
                                                                                                                                                                                                                          New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for

New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for characterizing gene function.

Claim 11; Page 46; 72pp; English

The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (1) a method of modulating the expression of a HBV gene in a tissue explant; (ii)) a method of generating a library of siNA constructs complexity; (iii) a cell containing one or more siNA molecules; (iv)a kit containing a siNA molecule which can be used to modulate the expression of a HBV target gene in a cell, tissue or complementary to an RNA sequence encoding HBV and the sense region of an an antisense region, where the antisense region comprises a sense and an antisense region, where the antisense region. The siNA conscrule is assembled from 2 nucleic acid fragments, where one fragment comprises the sense region and the second fragment engines region of the siNA molecule. Where sense region and the comprises the comprises the single region comprise separate oligonucleotides, and are covalently comprises region comprise separate oligonucleotides, and are covalently conformant and the sense region and the conformation and The antisense region 3'-terminal overhang is complementary to RNA encoding HBV. The siNA is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function analysis. The siNA molecules may also be used in clinical, industrial, environmental, agricultural and/or research settings. The present sequence represents 1 of 1504 HBV siNA molecules of the invention.

The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a tissue explant; (ii) a method of generating a library of siNa constructs having predetermined complexity; (iii) a cell containing one or more siNa molecules; (iv) a kit containing a siNa molecule which can be used to modulate the expression of a HBV target gene in a cell, tissue or corganism; and (v) a method for synthesising a siNa molecule. The siNa molecule is adapted for use to treat HBV infection, and comprises a sense and an antisense region, where the antisense region comprises sequence complementary to an RNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region. The siNA molecule is assembled from 2 nucleic acid fragments, where one fragment
                                                                                                                                                                                                                                                       Virucide, Hepatotropic, Gene therapy, ss, short interfering nucleic acid, siNA, hepatitis B virus, HBV, RNA interference.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for

comprises the sense region and the second fragment comprises the antisense region of the siNA molecule, where sense region and the cantisense region comprises separate oligonuclocides, and are covalently connected via a linker molecule. The linker molecule is a polynuclectide linker or a non-nucleotide linker. The sense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal overhang or antisense region comprises a 3'-terminal overhang or antisense region of pour 2 nucleotides. The antisense region 3'-terminal overhangs each comprise about 2 nucleotides. The antisense region 3'-terminal overhangs is complementary to RNA encoding HBV. The siNA is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function analysis. The siNA molecules and/or research settings. The present sequence represents 1 of 1504 HBV is INA molecules of the invention.
                                                                                                                                                                                                                                                                                                                                                          ö

```

The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (1) a method of modulating the expression of a HBV gene in a tissue explant; (ii)) a method of generating a library of siNA constructs having predetermined complexity; (iii) a cell containing one or more siNA molecules; (iv)a kit containing a siNA molecule which can be used to modulate the expression of a HBV target gene in a cell, tissue or organism; and (v) a method for synthesising a siNA molecule. The siNA molecule is adapted for use to treat HBV infection, and comprises sequence complementary to an RNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region. The siNA molecule is assembled from 2 nucleic acid fragments, where one fragment comprises the sense region and the second fragment comprises the antisense region of the siNA molecule, where sense region and the contribers and an alinker molecule. The linker molecule is a polynucleotide connected via a linker molecule. The linker molecule is a polynucleotide linker or a non-nucleotide linker. The sense region comprises a 3'-terminal overhang and the antisense region or the pNA for comprise and the antisense region comprises a 3'-terminal overhang and the antisense region comprises by the sum antisense region and the antisense region comprises by the pNA antisense region and the antisense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal overhang and the antisense region comprises to bNA antisense region and the antisense region comprises to bNA antisense region and the antisense region comprises a 3'-terminal overhang and the antisense region comprises to bNA antisense region a The antisense region 3.-terminal overhang is complementary to RNA encoding HBV. The siNA is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function analysis. The siNA molecules may also be used in clinical, industrial, environmental, agricultural and/or research settings. The present sequence represents 1 of 1504 HBV siNA molecules of the invention.

New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for characterizing gene function.

Claim 11; Page 46; 72pp; English.

The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA conterference or that inhibits HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a certification of a HBV gene in a cell containing on or more siNA molecules; (iv) a kit containing a siNA molecule which can be used to modulate the expression of a HBV target gene in a cell, tissue or conjection; and an antisense region of a HBV target gene in a cell, tissue or conjective; (iv) a kit containing a siNA molecule which can be used to conjective; (iv) a kit containing a siNA molecule which can be used to conjective; (iv) a kit containing a siNA molecule which can be used to comprise sequence complementary to the antisense region comprises a sense comprises region, where the antisense region comprises sequence complementary to the antisense region comprises the sense region and the sense region and the comprises the sense region and the sense region of the siNA molecule, where sense region and the connected via a linker molecule. The linker molecule is a polynucleotide inthem the sense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal coverhang and the antisense region comprises a conjection, and for characterising pathways of gene function, e.g. to inflections, and for characterising pathways of gene function, e.g. to inflictions, and for characterising pathways of gene function, e.g. to inflict activity of target genes in a pathway to determine the function of undial activity of target genes in a pathway to determine the function and/or research settings. The sink molecule in the man the present sequence represents 1 of 1504 HBV with a sund or research settings. sinA molecules of the invention.

Virucide; Hepatotropic; Gene therapy; ss; short interfering nucleic acid; siNa; hepatitis B virus; HBV; RNA interference.
The antisense region 3'-terminal overhang is complementary to RNA encoding HBV. The siNA is useful for treating human hepatitis B virus infections, and for characterising pathways of gene function, e.g. to inhibit activity of target genes in a pathway to determine the function of uncharacterised genes in gene function analysis. The siNA molecules any also be used in clinical, industrial, environmental, agricultural and/or research settings. The present sequence represents 1 of 1504 HBV siNA molecules of the invention.
                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New short interfering nucleic acid molecules which down-regulates expression of a hepatitis B virus (HBV) or which inhibits HBV replication, useful for treating human HBV infections or for characterizing gene function.

                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a fissue explant; (ii) a method of generating a library of siNA constructs tissue explant; (iv) a kit complexity; (iii) a cell containing one or more siNA molecules; (iv) a kit containing a siNA molecule which can be used to condulate the expression of a HBV target gene in a cell, tissue or more siNA molecule is adapted for use to treat HBV infection, and comprises a sense and an antisense region, where the antisense region comprises sequence complementary to are kNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region. The siNA comprises the sense region and the second fragments, where one fragment comprises the sense region and the second fragment comprises the comprise region of the siNA molecule. Where sense region and the second comprises and are covalently antisense region comprise separate oligonucleotides, and are covalently connected via a linker molecule. The linker sense region and the allower sense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal coverhang. The sinker occuprises a 3'-terminal coverhang mand the accomprise about 2 nucleotides.
                                                                                                                                                                           Virucide, Hepatotropic, Gene therapy, 8s, short interfering nucleic acid, siNA, hepatitis B virus, HBV; RNA interference.

regions, or alternatively are assembled from sense enube and antibense regions, or alternatively are assembled from a sense oligonucleotide. Specifically, the sinks include short interfering RNA (sirkNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (sirkNA). The sinks can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, can expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of sink, conjugates and/or complexes of sink, and vectors that express sink. The sinks are corganisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating a wide range of cancers such as breast and ovarian cancer. The sinks are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, cumban might (EGFR) targeted double-stranded sink, which is identical to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
The invention relates to a short interfering nucleic acid (siNA) molecule that down-regulates expression of a hepatitis B virus (HBV) gene by RNA interference or that inhibits HBV replication. Also disclosed are the following: (i) a method of modulating the expression of a HBV gene in a tissue explant; (ii)) a method of generating a library of siNA constructs having predetermined complexity; (iii) a cell containing one or more siNA molecules; (iv)a kit containing a siNA molecule which can be used to coganism; and (v) a method for synthesising a siNA molecule. The siNA molecule is adapted for use to treat HBV infection, and comprises a sense and an antisense region of a HBV target gene in a cell, tissue or complementary to an RNA sequence encoding HBV and the sense region comprises sequence complementary to the antisense region comprises the sense region and the sense region and the sense region and the sense region of the siNA molecule, where sense region and the comprises the sense region of the siNA molecule, where sense region and the sense region of the siNA molecule is a polynucleotide. Inher molecule is a polynucleotide inhibit or a innerse region comprise segion of the siNA molecule. The linker molecule is a polynucleotide. Inher molecule is a polynucleotide. Inher molecule is a polynucleotide. The antisense region comprises a 3'-terminal overhang and the antisense region comprises a 3'-terminal coverhang and the antisense region comprises a 3'-terminal coverhang and the antisense region comprises a 3'-terminal coverhang is conplementary to RNA cenceding HBV. The siNA is useful for treating pathways of gene function, e.g. to inhibit activity of traget genes in a pathway to determine the function coff uncharacterised genes in a pathway to determine the function and/or research settinings. The present sequence represents 1 of 1504 HBV sina molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to short interfering nucleic acids (siNA) which downregulate expression of one or more human epidermal growth factor ceceptor (EGFR) genes (including HBR). HBR2 and HBR3 how HBR3 by RNA interference. The siNAs may or may not comprise ribonuclectides and may be double or single stranded. They further comprise sense and matisense cregions, or alternatively are assembled from a sense oligonuclectide and an antisense oligonuclectide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short can contain deoxyribonuclectides, and can be chemically modified, can contain deoxyribonuclectides, and can be chemically synthesised. Specifically synthesised. The invention also capacise to kits for the in vitro or in vivo delivery of siNA, conjugates and/or complexes of siNA, and vectors that express siNA. The siNAs are used to modulate expression of EGFR genes in cells, tissue explants or cyganisms (e.g., by ex vivo gene thorapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating a wide range of cancers such as breast and ovarian cancer. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, such useful for trug screening, pharmacogenomics, contain upplying gene function, and gene mapping (e.g., of single nucleotide such and very or solve sinks are also expressed the sequence represents the lower strand of a breast and engage and gene mapping (e.g., of single nucleotide solve the such as breast and engage and gene mapping engages.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New short interfering nucleic acid, useful e.g. for treatment and diagnosis of cancer, downregulates expression of the epidermal growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises the amino acid and coding sequences of fibrocystin proteins. The DNA and protein sequences of the invention are useful for diagnosing and treating autosomal recessive polycystic kidney disease. The present DNA sequence represents a DHPLC FCR primer that was used to screen for mutations in the human fibrocystin (PKHDI) gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              P2V11 receptor; receptor; human; antianaemic; cardiovascular-gen.; CNS-gen;; respiratory-gen.; antiasthmatic; uropathic; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid comprising a sequence encoding a fibrocystin polypeptide, useful for diagnosing and treating autosomal recessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0.4%; Score 14.4; DB 1; Length 19; 93.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is a forward primer for human P2Y11 receptor

(P2Y11R) ADM41309. The forward primer, a reverse primer ADM41326 and

probe ADM41327 were used in an example from the invention for expression

profiling in human haematopoietic bone marrow cells. Higher expression of

P2Y11R mRNA was observed in erythroid progenitor (CD71+) cells than in

early progenitor (CD34+) cells. Expression decreased during

marrow compartment. The invention is based on the finding of increased

expression of P2Y11R mRNA in erythroid cells. It provides methods of

cuing P3Y11R p01ypeptides to screen for agents useful in the treatment

and/or prophylaxis of anaemia, especially pure red cell aplasia, anaemia

of chronic renal failure, anaemia of endocrine disorders, congenital

dyserythropoietic anaemia, iron deficiency, congenital atransferrinaemia

confidentic pulmonary haemosiderosis (claimed), and for the treatment

of haematological and cardiovascular diseases, disorders of the

peripheral and central nervous system, chronic obstructive pulmonary

disorder (COPD), asthma, genito-urological disorders and inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                             Screening for therapeutic agents useful for the treatment and/or prophylaxis of, e.g. anemia, comprises detecting binding of test compound with polypeptide and selecting compounds which bind to the polypeptide as

                                                                                                                                                                                                                                    of breast cancer comprising detecting the presence or absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical drug trials. The current sequence is that of an Extend primer (also described as probe) the invention which was used to genotype human NUMAI/FLJ20625/LOC220074 region gDNA. FLJ20625 and LOC220074 have been mapped to chromosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAQ71320 was used as a primer in the PCR amplification of replication competent, recombined viruses (esp. retro- or adeno-viruses). This enabled said viruses to be detected in very small concentrations (eg. 1 in 100 000 cells), in body fulls and tissue samples (useful in gene therapy), and in viral vector preparations, cell lines and transduced target cells. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or regions which are associated with breast cancer in a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting recombination of viral nucleic acid sequences - by recombined product with specific primers, esp. for detecting competent retro-viruses produced by gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0.4%; Score 14.4; DB 1; Length 19; 33.8%; Pred.                                                                                                                                                                                                                                                                        The sequences given in AAQ75219-25 are oligonucleotides which are used to demonstrate the method of the invention. These oligonucleotides may contain an amino group on their 5' end. The method constitutes an immunoassy of several immunochemical ligands. The reagent contains antibodies which specifically recognise one of the ligands to be assayed. Each antibody is attached to a different specific poly- or oligonucleotide, such as these. The antibodies are attached to a suitable label, e.g. horseradish peroxidase, biotin, avidin, digoxogenin, etc. The reagent reacts with the ligand to be assayed to give a complex which bears the label and also bears the nucleotide specific to the ligand. A complementary nucleotide is then added to which the complex becomes attached. The immobilised complex can then be assayed using the label. Several antibodies or antigens in a sample can be assayed using a single reagent. (Updated on 25-WAR-2003 to correct PN field.)
                                                        Simultaneous assay of several antigens or antibodies - using single immobilised nucleotide(s), and a mobile phase containing the complementary nucleotide(s) bound to a labelled ligand for the molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Primers T41001-T41382 are derived from novel human gene signature (GS) sequences which did not match with sequences deposited in Genbank release 76. The GS sequences (T19001-T26817) were obtained from 3.-directed cDNA libraries prepared from various human tissues; synthesis of CDNA was initiated from the 3.-end of mRNA by using poly(T) as the sole primer. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types. The primers T41201-2 amplify clone pm1688 which comprises the GS HUMGS001467 (T20467), located on chromosome 19
                                                                                                                                                                                                                                                                                                                           Single-stranded DNA for identifying gene signatures - isolated from 3'-directed human cDNA library that reflects relative abundance of corresp. mRNA in specific human tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identification of pyrazinamide resistant mycobacteria - used to distinguish between M. bovis and M. tuberculosis; also methods for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                THE SECTION OF THE SE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequences given in AAQ75219-25 are oligonucleotides which are used to demonstrate the method of the invention. These oligonuclectides may contain an amino group on their 5' end. The method constitutes an immunoassy of several immunochemical ligands. The reagent contains antibodies which specifically recognise one of the ligands to be assayed. Each antibody is attached to a different specific poly-or oligonucleotide, such as these. The antibodies are attached to a unitable label, e.g. horseradish peroxidase, biotin, avidin, digoxogenin, etc. The reagent reacts with the ligand to be assayed to give a complex which bears the label and also bears the nucleotide specific to the ligand. A complementary nucleotide is then added to which the complex becomes attached. The immobilised complex can then be assayed using the label. Several antibodies or antigens in a sample can be assayed using a single reagent. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Simultaneous assay of several antigens or antibodies - using single immobilised nucleotide(s), and a mobile phase containing the complementary nucleotide(s) bound to a labelled ligand for the molecule to be assayed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gene signature; messenger RNA; mRNA; relative abundance; frequency; human; cloning; mapping; non-biased library; diagnosis; detection; cell typing; abnormal cell function; primer; PCR; amplification;

                                                                                                                                                                                                                                                                                                                                                                                           RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                           8888888
                                                                                                                                                                                                                                                                                 8
                                                                                   The present sequence is a probe for a pyrazinamide (PZA) resistant Mycobacterium sp. pncA gane, which encodes an altered pyrazinamidase (PZAse). A novel method for differentiating between M. bovis and M. tuberculosis comprises detecting in a sample an altered pncA gene encoding a His57Asp substitution indicating that the sample comprises M. bovis. The pncA gene and PZAse may be used to treat individuals infected with PZA-resistant M. tuberculosis. The pncA gene or PZase may be administered with at least one other antimicrobial agent, e.g. isoniazid or rifampicin. Probes corresponding to sections of the pncA gene may also be used to identify resistant strains or to distinguish between M. bovis and M. tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is a novel oligomer comprising 20 covalently linked nucleotides which bind to the 5' untranslated region of the interleukin-1 receptor (ILIR) markh. Expression of ILIR, in cells and tissues can be modulated by compositions comprising oligomers which are able to specifically hybridise with target areas of its encoding sequence. The composition can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Type I interleukin-1 receptor; ILIR; human; IL1 protein; hybridisation; inflammation; ss; 5' untranslated region; phosphorothioate linkage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2'-substituted oligonucleotide(s) specific for interleukin-1 receptor type I - used to modulate expression and detect overexpression of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Phosphorothiate oligonucleotide sequence 8065 targeting ILIR mRNA.

Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis, pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these

                                                                                                                                                                                                                                                                                                                                               New isolated baboon histo-blood group O allele - used to develop products for producing group O non-human primates for use in xenotransplantation of organs and tissues.
                                                                                                                                                                                                                                                                                                                                                                                                          AAV65179-V65183 are PCR primers used in the amplification of human ABO DNA which is used in a method for identifying baboon O alleles, and carriers of O alleles as well as methods for producing baboons and baboon cells, tissues and organs having a group O phenotype. Such cells, tissues and organs can be used for xenotransplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antisense oligonucleotide; Jun N-terminal kinase; JNK; hybridise; JNKl; JNK2; Gell cycle progression; phosphorylation; tumour; probe; hyperproliferative disease; human; ss.

                                                                                                                                                                                                                                                                                                                                                                                                  New antisense oligonucleotides that detect and modulate the expression of un N-terminal kinase proteins - useful for treating hyperproliferative diseases and inhibiting tumor growth in animals, and for modulating protein protein phosphorylation by these proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Primer; WFS1; antidiabetic; renal; opthalmic; auditory; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to antisense oligonucleotides that detect and modulate the expression of Jun N terminal kinase (JNK) proteins. The oligonucleotides specifically hybridize to a nucleic acid encoding a JNK1, JNK2 or JNK3 protein, and which modulate expression of these proteins. The oligonucleotides are useful for modulating JNK protein. The oligonucleotides are useful for modulating JNK protein of a protein and eall cycle progression in cultured cells or animal cells. The oligonucleotides are phosphorylated by a JNK protein, and the expression of a cellular protein that promotes one or more metastatic expression of a cellular protein that promotes one or more metastatic events. The oligonucleotides also form pharmaccutical compositions for treating animals with a hyperproliferative disease, and for inhibiting tumor growth in an animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAA09033-34 are primers based on a predicted 5' untranslated region, based on the mouse EST sequence that was homologous to the human WFS1 cond based on the mouse EST sequence that was homologous to the human WFS1 cond based on the ware used for RT-PCR with MIN6 RNA. The WFS1 gene is from human forcomosome 4p, and is located between markers D4S50 and D4S431, conditions of which are associated with Wolfram syndrome. The nucleic acids may be used as a biological marker for early diagnosis of Wolfram CC acids may be used as a biological marker for early diagnosis of Wolfram CC syndrome and for predicting the predisposition of an individual to the syndrome. Disruptions of the gene which result in low protein expression or the expression of inactive protein products are associated with the development of the disease. The gene is also useful for gene replacement thereof agents (i.e. to rectify the mutations and/or supplement the individuals own production of the polypeptide) and for developing new methods and agents (i.e. agents which bind with either the nucleic acids or the protein to modulate it's expression and/or activity) for treating Wolfram syndrome. It is particularly useful for generating antibodies to the protein (i.e. Ab). Wolfram syndrome is a combination of familial juvenile conset diabetes mellitus, diabetes insipidus, optic atrophy and deafness
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                        Nucleic acids associated with, and useful for the diagnosis and treatment of Wolfram syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New retroviral vector containing heterologous sequence and sequences for site-specific integration into a non-coding genomic region, useful in gene therapy and for production of retroviral particles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

Control of the properties of the pol gene within the integrase region, was used in conjunction with PCR primers AA260550-58 (which are specific to the integrase region within the pol gene). The primers were used for deletion mutagenesis at the C-terminus of the primers were used for deletion mutagenesis at the C-terminus of the murine leukemia virus (MLV) integrase gene, beyond the catalytic site.

The resulting protein is inactivated. The mutated gene was used in the construction of an integrase deficient packaging cell line for the construction of an integrase deficient packaging cell line for the construction of an integrase deficient packaging cell line for the steroviral vectors of the invention. These retroviral vector comprise at site-specific integrate sequence that allows the site-specific integrate into a non-coding region of the host because they integrate specifically into a non-coding region of the host genome, rather than randomly, thus con-coding region of the host genome, rather than randomly, thus call minating the risk of causing deleterious genomic rearrangements. The derivoiral vectors (and systems containing them in packaging cells or derived retroviral particles (RVP)) are used for in vivo or in vitro gene therapy of viral infections. They are also used in the treatment of genetic, metabolic, proliferative or other diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel methods for reducing apoptosis comprising contacting cells with antisense oligonucleotides, useful for treating apoptotic disorders, e.g. \theta

nucleotide encoding a Jun N-terminal kinase (JNK2) protein, resulting in decrease of JNK2 expression and leading to induction of apoptosis. The present sequence is one such antisense oligonucleotide. The oligonucleotides of the present invention are useful for treating diseases or conditions with reduced apoptosis, e.g. cancer and cellular hyperproliferation. The oligonucleotides may also be used to increase the stimulation of apoptotic proteins, e.g. for treating Alzheimer's or Parkinson's disease, amylotrophic lateral sclerosis, retinitis, pigmentosa, epilepsy, mycoardial infarction, stroke, obstructive jaundice, polycystic kidney and diabetes. The present sequence may have a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PCR primers AAA61528-29 were used to amplify CDNA encoding a peanut resveratrol synthase polypeptide. The resveratrol synthase gene is used to produce edible transgenic plants which exhibit increased levels of resveratrol glucoside. Resveratrol is a stilbene, and a promoter of nitroxide formation, which is a vasodilatory agent and inhibits platelet aggregation. Transgenic plants of the invention are useful for increasing the nutritional value, for increasing disease resistance and for decreasing spoilage of the plant. Resveratrol synthase and resveratrol glucoside isolated from such plants are also useful for providing nutritional and pharmaceutical benefit to a human or animal by ingestion. Raised levels of resveratrol glucoside in foodstuffs such-as wines, may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New edible transgenic plant useful for nutritional supplements to inhibit cancer and cardiovascular diseases, is transformed with portion of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peanut; resveratrol synthase; edible plant; transgenic plant; resveratrol glucoside; stilbene; nitroxide formation; vasodilatory; platelet aggregation; nutritional value; disease resistance; spoilage; cardiovascular disease; cancer; artherosclerosis; inflammation;

be useful for the prevention of cardiovascular diseases, cancer, artherosclerosis and inflammation. (Updated on 15-5EP-2003 to standardise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to loblolly pine polynucleotides with one or more Simple Sequence Repeats (SSRs) (see AAA74205-A74322). SSRs are also known as microsatellite DNA repeats. The SSRs are useful as genetic markers for genetic mapping, population genetics studies and inheritance studies in various plant breading programmes. The present sequence is a PCR primer used for detecting the presence of a SSR locus in a pine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotide having simple sequence repeat useful as markers in plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for genetic characterization e.g. genetic mapping study, an inheritance study of a commercially important trait in a plant breeding program.

Human protein kinase C-theta antisense oligonucleotide, SEQ ID NO:54.

04-MAY-2001 (first entry)

AAF59861;

```
human insulin-like growth factor binding protein-5 (IGFBP-5). The invention relates to a composition for treatment of hormone-regulated cancer, comprising an antisense oligonucleotide (such as this sequence) which inhibits expression of IGFBP-5 by hormone-regulated tumour cells. The compositions is useful for delaying progression of hormone-regulated tumour cells such as prostatic cancer cells or breast cancer cells, to an androgen-independent state, by treating hormone sensitive tumour cells with the antisense sequence which inhibits expression of IGFBP-5 by the tumour cells. The composition can also be used for treating a hormone-cresponsive cancer in an individual, and administering the composition to the individual after initiation of hormone-withdrawal to induce apoptotic cell death of hormone-responsive cancer cells and therefore delaying the progression of hormone-responsive cancer cells to a hormone-independent state in the individual. It can also be used for inhibiting or delaying metastatic boney progression to inhibit the expression of IGFBP-5 by the hormone-responsive cancer cells to a hormone-independent composition to inhibit the expression of IGFBP-5 by the chormone-responsive cancer cells and therefore inhibiting or delaying metastatic boney progression of the tumour in a mammal, by administering the composition to inhibit the expression of IGFBP-5 by the concer cells, and therefore inhibiting or delaying metastatic boney progression of the tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition for treating hormone-regulated cancer, e.g. breast and prostatic tumors, comprising an antisense oligonucleotide that inhibits expression of insulin like growth factor binding protein-5 by hormone-regulated tumor cells.
                                                                                                                                                                                                                        Insulin-like growth factor binding protein-5; IGFBP-5; human;
antisense oligonucleotide; hormone-regulated cancer; prostatic cancer;

```
Sequences AAF59817-AAF59896 represent phosphorothioate 2'-MOE gapmer antisense targetted to the human protein kinase C-theta gene, which continated to the human protein kinase C-theta gene, which is the syrpession. The antisense oligonucleotides were designed to target different regions of the human protein kinase C-theta RNA, and were analysed for their effect on protein kinase C-theta RNA levels by committed two real-time PCR. Protein kinase C-theta RNA levels by CC theta, PKCT, PRKCT, nPKC-theta and PRKCQ) is one of several protein kinase C isozymes and is ubiquitously expressed, with the highest levels being found in haematopoietic cell lines. It has been shown to function in a calcium-independent fashion, and it is involved in a variety of contin a calcium-independent fashion, and it is involved in a variety of signal transduction pathways, for example, it is an upstream activator of the JNK/SAPK (UNIN N-terminal Kinase/Stress-activated protein kinase) compathway. Protein kinase C-theta is also involved in T-cell signalling compathways, cell cycle control, cellular activation, API transcription factor activation and the aetiology of AIDS, and has also been implicated and wound repair. It is additionally involved in insulin signalling and continue repair. It is additionally involved in insulin signalling and is thought to play a role in the development of diabetes in humans. The colligonucleotides of the invention are useful for diagnosis, prevention and treatment of conditions associated with protein kinase C-theta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Sequences AAG92560-C92639 represent antisense oligonucleotides targetted to the human nucleolin gene, which inhibit its expression. The antisense oligonucleotides were designed to target different regions of the human nucleolin mRNA, and were analysed for their effect on nucleolin mRNA concleolin mRNA, and were analysed for their effect on nucleolin mRNA levels by quantitative real-time PCR. Nucleolin (also known as P92 or C23) is the most abundant nucleolar phosphoprotein in actively growing cells. Nucleolin primarily participates in ribosome biogenesis and transport of ribosomal components, being able to transiently bind to preciposomes in the nucleolus via a ribonucleoprotein consensus sequence. However, it has also been shown to be involved in cytokinesis, on ucleogenesis, cell proliferation and growth, transcriptional represence to a member of the Ag-NOR (active ribosomal genes and whose expression is associated with the prediction cyganiser region) family of proteins which are markers of active ribosomal genes, and whose expression is associated with the prediction of tumour growth rate. The presence of antibodies against nucleolin are associated with systemic connective tissue diseases such as systemic connective diseases. The oligonucleotides of the invention are useful for diagnosis, connective diseases. The oligonucleotides of the invention are useful for diagnosis, connective diseases of the invention are useful for diagnosis,
                                                                                                                                    Human nucleolin phosphorothioate antisense oligonucleotide, SEQ ID NO:31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel antisense compound targeted to human nucleolin which specifically hybridizes with and inhibits the expression of human nucleolin, useful for modulating the expression of nucleolin in cells.
                                                                                                                                                                            Human nucleolin, P92; C23; phosphoprotein; ribosome biogenesis; ribosome transport; cytokinesis; nucleogenesis; cell proliferation; cell growth; transcriptional repression; replication, signal transduction; chromatin decondensation; Ag-NOR family; nucleolin antibody; systemic connective tissue disease; SLE; systemic lupus erythematosus;

This invention describes a novel DNA sequence (I) encoding the WTR1

protein that: (i) has at least one biological activity of a TRP

(cransient receptor potential) family protein; (ii) is connected with

etiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

with tumors involving lip15. Saboramalities. The products of the

cripulation of intracellular calcium ion levels, which are essential for

cellular responses to hormones and/or growth factors; also in apoptosis

and cell growth, death and differentiation, and in urogenital diseases,

including polycystic kidney disease. (I) and related ribozymes, antisense

CR RNA, proteins and antibodies (Ab) are used to treat or prevent diseases

CR RNA, proteins and antibodies (Ab) are used to treat or prevent

CR protein, or with calcium influx into cells, e.g. BWS, Wilms tumor,

rhabdoid tumors and rhabdomyosarcoma. Probes from (I), or Ab, are also

used for diagnosis of such diseases. (I) can also be used for recombinant

production of MRT1 proteins (II) (used for analysis, characterization and

cherapy), as tissue or chromosomal markers, for identifying genetic

chardy antibodies. (II) are used to raise anti-protein or

chardy Antibodies. (II) as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

chreapents human MTRI gene exon 19/intron 19 junction region described in DNA encoding MTR1 protein, useful e.g. for treating Beckwith-Wiedemann syndrome and tumors, also related proteins and antibodies. The present invention relates to a method of detecting tumour cells, by detecting extranuclear DNA consisting of a single-strand with a double-stranded stem-loop structure containing at least 2 binding sites for DNA binding proteins. The method can be used to detect cancer cells in tissue sections, biopsies, body fluids etc. and can be used in the diagnosis and monitoring of cancer. The present sequence is an extranuclear DNA sequence capable of being detected using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting tumor cells from presence of specific stem-loop DNA molecules outside the nucleus, useful for diagnosis and monitoring of tumors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel CaCo 2 cell line showing an enhanced expression of CYP3A4 without the addition of an inducer for CYP3A4 corpusation of an inducer for CYP3A4 is the major form of cytochrome P450 expressed in the capression. CYP3A4 is the major form of cytochrome P450 expressed in the colline also comprises a method for growing this cell line and a culture medium. The cell line of the invention may be used as a rool in pharmacoctor of the intestinal barrier and may be used as a tool in pharmacoctor toxicology. The cell line is also useful in in vitro models for screening the bioavailability of pharmaceutical compounds, xenobiotics or contronmental pollutants. The invention also discloses RT-PCR primers that may be used to analyse the expression of genes with sequence similarity to CYP2A4 such as CYP2A7, CYP3A4, CYP3A5, NADPH reductase, cyP2C, CYP2B1, CYP2B6, CYP2B1, CYP1A1, MDR1, MDR3, MRP1, MRP2, MRP3, GST CYP2C, CYP2B1, CYP2B7, UGT1A6 and beta actin in the cell line of the invention of one of the above mentioned containing the cell line of the invention under different culture
                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CaCo 2 cell line having enhanced expression of CYP3A4 without the addition of an inducer for CYP3A4 expression, useful in in vitro models for screening the bloavailability of pharmaceutical compounds, xenobiotics or environmental pollutants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Primer; reverse transcription; RT-PCR; ss; human; CaCO2; CYP1A1; MRP1; CYP3A4; intestinal barrier; pharmaco-toxicology; xenobiotic; MRP3; environmental pollutant; CYP3A7; CYP3A4; CYP3A5; NADPH reductase; MRP2; CYP2C; CYP2B1; CYP2D6; CYP2E1; MDR1; MDR3; GST Pi; GST alpha 4; UGT2B7; UGT1A6; beta actin.

The sequences given in ABA00075 and ABA00083-85 are probes and primers which were used in the detection of H. pylori infection pre- and post-
contractment in a patient, compared to the presence of human DNA. These sequences may be used in the method of the invention for detecting a H. pylori infection. The method comprises: (a) determining an integrity of a Helicobacter pylori nucleic acid present; or (b) amplifying and detecting a felicobacter pylori nucleic acid at least 200, at first, second or third Helicobacter pylori nucleic acid at least 200, infection if the integrity of the nucleic acid exceeds a predetermined infection if the integrity of the nucleic acid exceeds a predetermined contracter pylori infection, determining its status, monitoring mucleic acids are detected. The method is useful for detecting a Helicobacter pylori infection, determining its status, monitoring disease by detecting a high-integrity Helicobacter pylori nucleic acid in a pasays detecting a high-integrity Helicobacter pylori uncleic acid in a pasays detecting H. pylori infection usually lack the specificity to distinguish a successfully treated patient from a patient with a continuing H. pylori infection. The present invention of non-invasive method uses more sensitive and more specific assays to test for and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting, grading and/or monitoring a Helicobacter pylori infection by detecting a high-integrity H. pylori nucleic acid in a patient sample.

                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises antisense oligonucleotides that are capable of inhibiting expression of the human clusterin gene. The antisense oligonucleotides of the invention are useful for inhibiting the expression of clusterin in cells. The antisense oligonucleotides are also useful for treating an animal with a disease or condition associated with clusterin (e.g., hypercholesterolaemia; cardiovascular disorders; hyperproliferative disorders; and hyperlipidemic disorders; has present DNA sequence represents a clusterin antisense oligonucleotide of the invention. NOTE: The present DNA sequence has a phosphorothioate backbone and also contains 2'-O-methoxyethyl wings
                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antisense compound targeted to nucleic acid molecule encoding clusterin, useful for treating animal having disease associated with clusterin such as hyperlipidemic disorder, cardiovascular disorder.
                                                                                                                                                                                                                                                                                                                                                                                                       Human, antisense inhibition, antisense oligonucleotide, clusterin; hypercholesterolaemia, cardiovascular disorder; ss; hyperproliferative disorder; hyperlipidemic disorder; phosphorothioate, backbone; 2'-0-methoxyethyl wing.

The invention provides a novel system for evaluating transcription activity in eukaryotes using novel reporter vectors designated as intranscriptional regulation analysis system (TRAS). In an example from the invention, a TRAS-XRE vector was constructed comprising a reporter gene, a minimal promoter and a S-repeated xenobiotic response element (XRE, see PRN813777), and was used to transfect HeLa and HepG2 cell lines. The present sequence is a primer that was used in a PCR to evaluate establishment of TRAS-XRE cell lines. Such cell lines can be used to examine the activity of transcription factors and to determine the effects of substances affecting transcription activity. These compounds can be used to treat or prevent a disease or disorder caused by dioxinlike compounds, such as endocrine disruption, decrease of sperm number,
                                                                                                                                                                                                                                                                                                                                                            Screening substances affecting transcription associated with promoter, by measuring protein expressed by a cell transfected with a reporter vector comprising reporter gene encoding protein and the promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        decrease of testis weight, endometriosis, breast cancer, testis cancer, prostate cancer, sexual organ malformation, decrease of immune function

```
The present invention describes an isolated human monoclonal antibody (I) that specifically binds to human interleukin 15 (IL-15) and inhibits IL-15 to the specifically binds to human interleukin 15 (IL-15) and inhibits IL-15 induced proinflammatory effects upon binding to its receptor. (I) has antirheumatic, antiarthritic, antiinflammatory, antipsoriatic, immunosuppressive, cytostatic and antimicrobial activities. (I) is useful for inhibiting IL-15 induced, but not IL-2 induced, TNFalpha production by T cells or monocytes, which involves contacting IL-15 induced, real or proliferation, which involves contacting IL-15 induced, T cell or contacting IL-15 induced, but not IL-2 induced, T cell or such inhibiting IL-15 induced, but not IL-2 induced, T cell or cells such as peripheral blood mononuclear cells (I) in the presence of T cells such as peripheral blood mononuclear cells (PBMCs) or CTLL-2 cells. (I) is useful for treating or preventing a disorder mediated by carbitish, inflammatory bowel disease, cancer, transplant rejection or an infectious disease. (I) is also useful for diagnosing an IL-15 can infectious disease. (I) is also useful for diagnosing an IL-15 cell expressing IL-15 by contacting the presence of IL-15 antigen, or a complex between antibody or its portion and IL-15 and a control sample, complex, where formation of a complex, where formation of a complex is indicative of the presence of IL-15 in the sample. The present sequence represents a PCR complex for the human antibody 14687 VH region, which is used in an
                                                                                                                                                                                                                                                                                                        New isolated human monoclonal antibody that specifically binds to human interleukin-15 and inhibits IL-15 induced proinflammatory effects, useful for treating or preventing rheumatoid arthritis and psoriasis.
                                                                                                                                                                               Gerritsen AF;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 20 BP; 3 A; 3 C; 8 G; 4 T; 0 U; 2 Other;

PCR primers ABZ68114-15 were used to amplify a fragment of the human Rhase L gene. The amplified fragment was examined for the presence of a mutation, in the course of the invention. The specification describes a method for detecting cancer or a predisposition to cancer in a mammal. The method comprises detecting at least one mutation in a gene encoding interferon inducible 2',5'-oligoadenylate-dependent Rhase L in a test sample obtained from the mammal, where at least one mutation indicates cancer or predisposition to cancer. The method is useful for producing a medicament for treating a mammal prophylactically or therapeutically for cancer that is due to a complete or partial loss of wild-type RNase L 1..20

The method comprises annealing the 1 end of a single-stranded oligonucleotide to a single-stranded overhang comprising TIAGG repeat sequences, and covalently binding the oligonucleotide to the ? end of the C-rich telomeric strand forming a ligation product. This ligation product is amplified to form a primer extension product, whose length is then detected. The method is useful in assessing potential anti-cancer treatments and cancer-related procedures. It can also be used in assessing telomere dynamics with age, effect of modulating telomerase activity, and in assessing, treating or Gaps Stephan ô PCR primer used to amplify a 461 bp fragment of RNase L gene. The present invention relates to novel antisense oligonucleotides (ACCYOS20-ACCYOS27) which are targeted to a sphingosine-1-phosphate lyase DNA sequence, and specifically hybridizes with the nucleic acid and inhibits the expression of sphingosine-1-phosphate lyase. The antisense

the AS oligonucleotide (or its bioequivalent, and a pharmaceutical carrier), treating an animal having/suspected of having/prone to having a hyperproliferative disease (by administering to a prophylactic or therapeutic amount of the composition of the AS oligonucleotide).

C therapeutic amount of the composition of the AS oligonucleotide, modulating the expression of a JNK protein in cells or tissues by contacting the cells or tissues with the AS oligonucleotide, modulating the cell cycle progression (or the phosphorylation of a protein properson or more metastatic events in cultured cells, inhibiting common or animal) by administering the oligonucleotide to the cells, inhibiting an animal) by administering the oligonucleotide to the cells, inhibiting the growth of a tumour in an animal by administering a human having a disease or condition associated with a JNK protein or characterised by a reduction in apoptosis by administering a prophylactic or therapeutic amount of the condition characterised by a reduction in apoptosis, such as a disease or condition characterised by a reduction in apoptosis, such as a disease or condition (e.g. fibrotic scarring, peritoneal adhesions, lung fibrosis or condition (e.g. fibrotic scarring, peritoneal adhesions, lung fibrosis or condition (e.g. fibrotic scarring, peritoneal adhesions, lung fibrosis or condition, such as cancer. The antisense oligonucleotides may also be used as research agents and diagnostic aids, to detect the present of converse of sources of sources
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cytostatic; antisense therapy; co-repressor;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 current sequence represents an antisense oligonucleotide for the inhibition of human COREST mRNA levels. Nucleotides of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a new antisense compound comprising 8-50 nucleobases in length targeted to a nucleic acid molecule encoding a crepressor for REI silencing transcription factor (CoREST), where the compound specifically hybridises with and inhibits the expression of COREST. The COREST antisense oligonucleotide has any of 72 specifically claimed sequences of 20 bp, given in the specification. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of COREST, such as a developmental disorder and/or a hyperproliferative condition like neuronal cancer. The current sequence represents an antisense oligonoleotide for the
                                                                                                                                                                                                                                                                                               New antisense oligonucleotide compounds, useful for the diagnosis, prevention and/or treatment of conditions with aberrant expression or activity of COREST, such as developmental and/or hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   primer, male infertility; infertility-associated mutation, azoospermia factor; Y-chromosome; cystic fibrosis transmembrane conductance regulator; CTFR; Kallmann syndrome; KALI, androgen resistance; steroid 21-hydroxylase; CYP21; microarray; quantitative trait locus; in vitro fertilization;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

This invention describes a novel method for investigating genetic infertility or predisposition in males. The method involves selecting at least two infertility-associated mutations which are recessive or least two infertility-associated mutations with the heterozygous state and/or only in the homozygous state. Preferably at least one azoospermia factor is detected which may be lost by microdaletions in intervals 5 or 60 the Y-chromosome. Also any of several hundred mutations, listed, present in the cystic fibrosis transmembrane conductance regulator (CTFR), Kallmann syndrome (KALI), androgen resistance (AR) or steroid 21-hydroxylase (CYP21) genes may be detected. Probes for the mutated genes and/or native nucleic acid, or their complementary strands, are fixed to a carrier, particularly as a microarray, then tested for hybridization with oligonucleotides from or synthesized from, a patient sample and hybridization detected. Multifactorial analysis is by standard statistical methods, particularly the quantitative trait locus method. The method is used to diagnose the quantitative trait locus method. The method is used to diagnose the quantitative trait locus method. The method is used to diagnose the quantitative for possible application of the subjects with oligospermia for possible application of the intracytoplasmic sperm injection method. Analysis of many mutations improves diagnosis of the genetic basis of male infertility, in cluding complex interactions between different heterozygotic mutations. A chip for analyzing genetic infertility in males comprises oligonucleotides that represent known mutations (nonsense or missence, insertions, and propermy of the method in the propermy of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fibrosis transmembrane conductance regulator, Kallmann syndrome, androgen resistance and steroid 21-hydroxylase genes. ADD42140-ADD42633 represent oligonucleotides used in the microarray described in the method of the invention. NOTE: there are no SEQ ID's 133, 472 or 473 represented in the
                     Investigating male genetic infertility, useful for diagnosis e.g. for assessing suitabilty for in vitro fertilization, based on multifactorial analysis of infertility-related mutations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DR-4 nuclear receptor binding site; transcriptional enhancer;

The present invention relates to a method (M1) for determining a predisposition for or the occurrence of neurodegenerative disease in a saughject. The method comprises detecting in a target nucleic acid obtained from the subject the presence or absence of an allalic variant of one or more polymorphic regions of one or more genes selected from upA (Urokinase plasminogen activator). SNGG (gamma-synuclein), IDE (insulingerase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the presence of at least one of the allalic variant of one or more polymorphic regions is indicative of a predisposition for or the occurrence of neurodegenerative disease. The genes are all located on chromosome 10. M1 is useful for determining a predisposition for or the occurrence of, and for treating neurodegenerative disease, particularly Alzheimer's disease. The present sequence is a PCR primer, which was used
                                                                                                                                                                               Determining a predisposition for or the occurrence of neurodegenerative disease, e.g. Alzheimer's disease by detecting in a target nucleic acid the presence or absence of an allelic variant of one or more polymorphic

                                                                                                                                                                                                                                                                                         regions.
The present invention describes an isolated nucleic acid sequence comprising at least a DR-4 nuclear receptor binding site, where the nucleic acid sequence functions as transcriptional enhancer of the 5-caminolevulinic acid synthase gene. Also described: (1) a genetic construct comprising the above nucleic acid sequence operably linked to a nucleic acid encoding a reporter molecule; and (2) a method for testing compounds for medulation of haem and/or P450 cytochrome synthesis, computating sultable cells comprising the above genetic construct with a test compound and detecting enhanced or repressed expression and/or transcription of the nucleic acid sequence encoding the reporter gene. The nucleic acid or genetic construct can be used for testing of chemical compounds as modulators of haem and/or P450 cytochrome synthesis. The present sequence represents a PCR primer used in the generation of a probe for the chicken 5-aminolevulinic acid synthase (AlaAS1) gene, which is used in the exemplification of the
                                                                                                                                                                                                                New transcriptional enhancer of the 5-aminolevulinic acid synthase gene, useful for testing of chemical compounds as modulators of heme and/or P450 cytochrome synthesis, comprises at least a DR-4 nuclear receptor

The present sequence is that of a forward PCR primer for the chicken aminolevulinic acid synthase (ALAS1) gene. The primer was used to generate a probe for ALAS1, in a PCR using chicken embryo liver genomic DNA as template. ALAS1 drug responsive enhancer sequences (ADRES) have been identified ADP18139-ADP18140. These include DR4 and DR5 nuclear receptor binding sites. An isolated nucleic acid sequence, such as the ADRES sequence, that comprises at least a DR4 site is claimed. A claimed genetic construct comprises the nucleic acid sequence and a reporter modulation of heam and/or cytochrome P450 synthesis. Cells compounds for modulation of heam and/or cytochrome P450 synthesis. Cells comprising the genetic construct are contacted with the test compound, and enhanced/reduced expression and/or transcription of the reporter gene is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Variant detecting primer extension assay extension primer, SEQ ID No 35.

primer extension assay, useful for analysing molecular events for identifying mutations indicative of cancer, by contacting a target nucleic acid primer complementary to a region of the target nucleic acid betecting a variant in a primer extension assay comprises contacting a target nucleic acid primer complementary to a region of the target nucleic acid, and extending the primer in the presence of a first uncleded that is complementary to a first variant nucleotide suspected to be at a position downstream of the region and a second nucleotide that

The invention relates to a novel method for detecting a variant in a

Example 5; SEQ ID NO 35; 54pp; English.

molecular events for identifying mutations indicative of cancer, by contacting a target nucleic acid primer complementary to a region of the target nucleic acid.

```
is complementary to a second variant nucleotide at the position, thus to reduce misincorporation of the first nucleotide on a template comprising the second variant nucleotide. The methods are useful for analysing molecular events for identifying individuals with mutations indicative of cancer. They are particularly useful in detecting a rare mutation in a heterogeneous biological sample (e.g. sporadic mutation in a heterogeneous patient sample), detecting rare genotypes in genotyping reactions (e.g. viral genotyping reactions), or detecting mutant or viral sequences in pooled samples (e.g. detecting polymorphisms or inherited sequence variations in pooled patient samples). This polymucleotide sequence represents a primer used as part of the primer extension assay

immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPPO

Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or

Disclosure; SEQ ID NO 14415; 872pp; English.

ubiquinone

The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonuclectide antisense to the initiation codon, coding region, ? or 3' end genomic flanking regions, s' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or masal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive,

```
immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung surfammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at tp. whoo.int/bub/Dublished or seminance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or ansal airway dysfunction and a second active agent comprising an antiinflammatory steroid and biquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy; lung inflammation; respiratory disease; ds.

immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antiinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO WPI; 2003-229219/22. WO200285308-A2. The invention relates to a novel pharmaceutical composition, which has a

first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive,

immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also for enhancing the prophylactic or therapeutic respiratory effect of an antinflammatory steroid in a subject, for reducing or depleting levels of, or reducing sensitivity to adenosine, reducing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data dor this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences Pharmaceutical composition for treating ailments associated with impaired respiration, has oligo(s) antisense to specific gene(s) or its corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or Human, antisense; lung dysfunction, nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiasthmatic; hypotensive; immunosuppressive; cytostatic; gene therapy; antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy; Gaps Katz E, Pabalan J, Aguilar D; ő 0.4%; Score 14.4; DB 1; Length 20; 13.8%; Pred. Generating insulin-secreting cells from precursor stem cells or adult panoreatic exocrine cells, for generating glucose sensitive insulin secreting beta cells for transplantation, comprises using neurogenin3 or NeuroD/beta2

Example 5B; Page 36; 66pp; English.

The invention relates to a method for generating insulin-secreting cells from precursor stem cells or adult pancreatic exocrine cells. The method acid molecule encoding neurogenin 3 (ngm3) or exocrine cells to: a nucleic acid molecule encoding neurogenin 3 (ngm3) or NeuroD/Deta2; or an activator of ngm3 or NeuroD/Deta2 gene expression, under conditions effective to generate the insulin-generating cells from the precursor or exocrine cells. The invention is useful in generating insulin-secreting cells from precursor stem cells or adult pancreatic exocrine cells is useful for generating glucose sensitive insulin secreting beta cells suitable for transplantation, and for in situ development of insulin-secreting premature differentiation of precursor stem cells into insulin-secreting beta cells and for indentifying compounds that prevent or activate beta

The methods are useful for determining the presence of a disorder, treating inflammation, Familial cold uriticaria/familial cold autoinflammatory syndrome (FCV)FCAS) or Muckle Wells Syndrome (WWS), and identifying a substance useful in modulating binding of a cryopyrin protein to a second protein. The oligonuclocide is useful in diagnosing a disorder characterized by an aberrant CLASI gene. This sequence corresponds to a primer used to amplify the cryopyrin gene of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated cryopyrin protein and encoding nucleic acid, useful for diagnosing and treating inflammatory disorders, in particular familial cold urticaria, familial cold autoinflammatory syndrome and/or Muckle

comprising oligonuclectides, a novel composition, allergies and bronchoconstriction, respiratory tract inflammation, allergies and bronchoconstriction, respiratory tract inflammation, allergies and bronchoconstriction, respiratory tract inflammation, allergies and cantification or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition and/or bonofoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated in the lungs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchiis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system
                                                                                                                                                                                                        respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cyetic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel composition (a) a first active agent,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ç

inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respirator distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system

ö

or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung

Thu Oct 28

```
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstruction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (B) the oligonucleotides, (C) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a caradrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered to reduce the production composition composition
e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.

The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligomucleotides, (c) of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenargic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The composition and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, circliammation, allergies and/or surfactant hypoproduction are associated inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system cere, into the system cere, the oligomucleotides into products that free adenosine into the system cere of the oligomucleotides the oit.
surfactant depletion or hyposecretion, when administered to a mammal. The objognucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

The invention describes a novel composition of a livite active agent, comprising oligomucleotides, effective for alleviating active agent, respiratory tract inflammation, allergies and bronchoconstriction, respiratory tract inflammation, allergies and craduating adenosine sensitivity, levels of adenosine (A) or (A) receptors, curfactant depletion or hyposecretion, when administered to a mammal. The oligomucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.

The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligomucleotides, (c) analgesic, hypotensive, immunosuppressive and cytostatic activity, is a certain a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production of treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production and/or bornchoconstriction and/or lung corresponding to inflammation, allergies and/or bronchoconstriction and/or lung with a disease or condition such as pulmonary viscometricition, allergies as sthma, impeded respiratory disease, pulmonary corresponding to inflammation, allergies asthma, impeded respiratory diseases, pulmonary corresponding to transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymication beautometrian and thereby, to prevent the programmation and thereby, etc, tissue environment and thereby, to prevent any unwanted effects due to it composition (a) a first active agent, Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted tnucleic acids associated with lung airway or lung dysfunction, and Claim 15; SEQ ID NO 3377; 763pp; English. invention describes a novel bronchodilating agent.

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery of the invention also describes a kit, that comprises: (a) a delivery is a constructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, of the invention has antiallergic, antiinflammatory, antiasthmatic, consposition cancerastic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchost transcribed and an antial and an a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it

Human PDE4C-derived oligonucleotide SEQ ID 14415.

Human; antisense; bronchoconstriction; allergy; hyposecretion; pain;

```
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, cautedrant depletion or hyposecretion, when administered to a mammal. The colligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention an antiallersic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction are associated inflammation, allergies and/or surfactant hypoproduction are associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonuclectides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                    surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cycotatic; cystic fibrosis; beta-adrenagic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating adenosine sensitivity, levels of adenosine (A) or (A) receptors, reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction also describes a kit, that comprises; (a) a delivery of the invention also describes a kit, that comprises; (a) a delivery of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytosetal cartivity, is a composition comparises oligonise. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The reduce the amount of target polypeptide present in the lungs. The inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligoner content of the anti-sense oligoner content for the anti-sense oligoner content of the anti-sense oligoner content
                                                                                                                                                                                                                                       Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pharmaceutical composition for treating asthma, has antisense oligonuclectide containing less percentage of adenosine, targeted to nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Katz E, Pabalan J, Aguilar D;
                                                                                                                                                                                           AA497002-derived oligonucleotide SEQ ID 6973.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 15; SEQ ID NO 6973; 763pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Li Y, Sandrasagra A, Ka

comprising oligonacieotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung expression of a target polypeptide associated with lung airway or lung of dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallargic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic, antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cycostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory districtses syndrome; allergic rinititis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel composition (a) a first active agent

This invention describes a novel composition, all title active agent, comprising oligomuclectides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and bronchoconstriction, respiratory tract inflammation, allergies and creducing adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligomuclectides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligomuclectides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or treating a respiratory, lung or malignant disease. The administered correduction and/or bronchoconstriction and/or lung or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung or inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, and or many and or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, and or surfactant any unmentent of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system of the oligonucleotides into products that free adenosine of the oligonucleotides into expect due to it tissue environment and thereby, to the prevent any unwanted effects due to i

which comprises judging base types at any of 28 sites selected from the rice genome, or of the bases in these sites of base pairs of the bases at such sites in the complementary strand and relating the judged base types with the rice variety. The method is useful in distinguishing and with the rice variety. The method is useful in distinguishing and specifying varieties analogous to each other at DNA level for quality control of 24 rice varieties, to detect adulterants and mixing with cheaper varieties for protection of small traders and consumers.

```
This invention relates to a novel method of determining a predisposition for or the occurrence of neurodegenerative disease comprising detecting in a target nucleic acid obtained from the subject the presence of an allelic variant of polymorphic regions of human genes selected from urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The method is useful in determining the presence or predisposition to a neurodegenerative disease, particularly Alzheimer's disease. The present sequence is that of a sequencing primer which was used for sequencing of a region of the human TNFRSF6 gene in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
disease, particularly Alzheimer's disease, comprises determining the presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antisense oligonucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetees; obesity; cardiovacular disorder; hyperlipidaemia; Cushing's syndrome; human; ss; phosphorothioate backbone; 2-methoxyethyl; 2'-MOB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human glucocorticoid receptor-specific antisense oligonucleotide #152.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-NOE) wings and a phosphorothioate backbone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                    New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                            antisense oligonucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; ss; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.

The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-NOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    syndrome; human; ss;

to nucleic acids encoding a mammalian glucocorticoid receptor. The antiesnes oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
             New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a polynucleotide isolated from a human gene and is useful for detecting a single nucleotide polymorphism in a human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.
                                                                                                                                The invention comprises an antisense oligonucleotides that are targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel polynucleotide useful for PCR amplification along with two DNA fragment from another set of sequences, or for detecting single nucleotide polymorphism in human gene.
                                                                                                                                                                                                                                                                                                                                                           0.4%; Score 14.4; DB 1; Length 20; 13.8%; Pred. The present invention relates to a polynucleotide isolated from a human gene and is useful for detecting a single nucleotide polymorphism in a human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.

```
uncleic acid molecule encoding Navi.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navi.3. The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder; including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2,MOE wings and a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target different regions of the human Navi.3 RNA.
                                                                                                                          Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an oligonucleotide anti-sense to e.g., initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-cend of nucleic acid target comprising gene(s) chosen from e.g. interleukin (IL)-4 receptor, IL-5 receptor or salts of the cligonucleotide and optionally surfactant operatively linked to the cligonucleotide. The method is useful for preventing or treating a respiratory or lung disease, which involves administering to the airways of a subject an effective amount of an inhibitor. The oligonucleotide is conseful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease. The respiratory or lung disease. The respiratory or lung disease. The respiratory or lung disease is chosen from airway inflammation, allergy(ies), asthma, impeded consent from airway inflammation, allergy(ies), asthma, impeded consent from airway inflammation, ung inflammation, bronchitis, airway obstruction. The present sequence represents an oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                 Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codons and introns of respiratory disease-relevant genes e.g., CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g., asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; 88.

(PHAA) PHARMACIA CORP

The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate beadache, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with human Nav1.3 expression, the oligonucleotides inhibition of human Nav1.3 expression, the human Nav1.3 RNA. Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss. Chimeric phosphorothioate oligonucleotide to target Nav1.3 #1331.

New antisense compound targeted to a nucleic acid molecule encoding Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3. e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate beadache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy, or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with human Nav1.3 expression, the oligonucleotides are designed to target different regions of the human Nav1.3 RNA.

New antisense compound targeted to a nucleic acid molecule encoding Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

WPI; 2004-203785/19.

Claim 4; SEQ ID NO 1787; 417pp; English.

Claim 4; SEQ ID NO 1331; 417pp; English.

The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate

ö
headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target different regions of the human Navi.3 RNA.
                                                                                                                                                                                                                                                                                                                     Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound appecifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuropathy, arthritic pain, lower back pain, diabetic neuropathy, triggminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2'MOB wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                     Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

New antisense compound targeted to a nucleic acid molecule encoding Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or atexia.

The present invention relates to an antisense compound targeted to

The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neurapia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, beadache; seizure disorder such as childhood seizure disorder; including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2,700E wings and a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

```
nucleic acid molecule encoding Navi.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navi.3. The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder; including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2,7MOE wings and a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target different regions of the human Navi.3 RNA.
                                                                                                                                  New antisense compound targeted to a nucleic acid molecule encoding Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3. e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate pain from burns, migraine headache, cluster headache, mild-to-moderate but not limited to neonatal or infantile epilepsy, or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with human Nav1.3 expression, the oligonucleotides inhibition of different regions of the human Nav1.3 RNA.
                                                                                                                                                                                                                                                                                                     New antisense compound targeted to a nucleic acid molecule encoding about.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
